Contaminated Soils:

Contaminated Soils Robert V. Steinberg, 2009 Soil contamination is caused by the presence of man made chemicals or other alteration in the natural soil environment This type of contamination typically arises from the rupture of underground storage tanks application of pesticides percolation of contaminated surface water to subsurface strata oil and fuel dumping leaching of wastes from landfills or direct discharge of industrial wastes to the soil The most common chemicals involved are petroleum hydrocarbons solvents pesticides lead and other heavy metals The occurrence of this phenomenon is correlated with the degree of industrialisation and intensity of chemical usage The concern over soil contamination stems primarily from health risks both of direct contact and from secondary contamination of water supplies It is in North America and Western Europe that the extent of contaminated land is most well known with many countries in these areas having a legal framework to identify and deal with this environmental problem this however may well be just the tip of the iceberg with developing countries very likely to be the next generation of new soil contamination cases This book gathers the latest research from around the globe in this field

Description and Sampling of Contaminated Soils J. Russell Boulding, 2017-09-29 This second edition of EPA's bestselling book *Description and Sampling of Contaminated Soils A Field Guide Second Edition* has been revised and significantly expanded over the original edition An ideal reference for anyone involved in site investigations this guide describes how to determine the amount and extent of soil contamination and potential for movement of contaminants in the soil and groundwater It contains checklists tables and step by step descriptions of methods and procedures for Cost effective detailed site investigations for evaluating the potential for contaminant transport Field collection of information on soil engineering properties required for remediation selection and design This guide also features an adaptation of soil description procedures used by the U S Soil Conservation Service SCS for investigating contaminated sites The SCS soil description and classification procedures when used in combination with the Unified Soil Classification System currently used by geologists and engineers greatly improves contaminated site assessments

Remediation of Petroleum-contaminated Soils David J. Friend, 1996 This synthesis will be of interest to state transportation personnel involved with project planning and location administrative and regulatory personnel design staff general civil geotechnical and environmental engineers and project managers construction and maintenance engineers and staff It will also be of interest to federal and state environmental agencies and to environmental consultants and contractors as well as to trainers in the field of petroleum contaminated soil remediation This synthesis describes the remedial technologies that may be available to transportation agencies faced with the regulatory responsibility to clean or remediate petroleum contaminated soils in the vadose zone unsaturated soils above the groundwater table at a particular site as well as the state of the practice within the agencies This report of the Transportation Research Board describes the applicability and cost effectiveness of alternate technologies to remediate petroleum contaminated soil Practices currently being used by state

transportation agencies to remediate petroleum contaminated soils both on site and off site are also described This summary of transportation agency practice complements the limited telephone survey of soil remediation techniques that was performed in preparing NCHRP Report 351 Hazardous Wastes in Highway Rights of Way

Remediation of Petroleum Contaminated Soils Eve Riser-Roberts,2020-11-25 This book combines the results of current research with essential background material to provide complete in depth coverage of every aspect of in situ and ex situ bioremediation as well as an extensive overview of the physical and chemical processes currently available for treating petroleum contaminated soils Critical information has been collected and assembled under one cover to provide a convenient reference for anyone who must contend with this worldwide problem Remediation of Petroleum Contaminated Soils Biological Physical and Chemical Processes describes how to optimize the biodegradation of petroleum hydrocarbons in soil water systems It reports on the susceptibility of various petroleum components to biodegradation by microorganisms and considers all groups of microorganisms for their potential contributions The book also deals with problem areas such as the transport of organisms oxygen or nutrients throughout the subsurface as well as biodegradation of polynuclear aromatic hydrocarbons PAHs and nonaqueous phase liquids NAPLs In addition the book presents a variety of methods for monitoring bioremediation This reference discusses current soil remediation processes and includes many innovative approaches It also investigates means of controlling volatile organic compounds VOCs and leachate and addresses methods for collecting and treating these secondary waste streams The expansive coverage of this book will furnish readers with a wide range of options for developing treatment strategies and for customizing procedures for specific requirements

Geoenvironmental Engineering Raymond N. Yong,2000-09-25 Why do some contaminants remain in soils indefinitely How much of a threat do they pose to human health or the environment The need for effective and economic site decontamination arises daily Geoenvironmental Engineering Contaminated Soils Pollutant Fate and Mitigation discusses why soils remain contaminated focusing on the development of the factors properties characteristics and parameters of soils and individual contaminants Subjects covered include the basic properties of soils affecting accumulation of contaminants long term retention of contaminants and their fate including the development of intermediate products The author emphasizes the factors interactions and mechanisms important in the bonding and partitioning process He provides the groundwork for determining the fate of pollutants in soils and sediments and their mitigation Geoenvironmental Engineering Contaminated Soils Pollutant Fate and Mitigation focuses on why soils and sediments remain contaminated not how they became contaminated in the first place You will understand why specific contaminants remain in soils and sediments how much of a threat they pose to human health and the environment and what steps to take for mitigation With this information you can determine the extent of the contamination of soils and sediments how long they will remain a threat and what methods to use for their remediation

Contaminated Soil '90 F. Arendt,M. Hinsenveld,W.J. van den Brink,2013-12-11 A Rorsch TNO Board of Management In 1985 the Netherlands

Organization for Applied Scientific Research TNO in cooperation with the Netherlands Ministry for Housing Physical Planning and the Environment took the initiative for a conference on an important environmental problem contaminated soil and groundwater We named it somewhat self assured the First International TNO Conference on Contaminated Soil And indeed the contamination of soils and groundwater proved to be an environmental issue of such an extent that soon after the successful first conference TNO started preparations for a second one this time in cooperation with the State Ministry for the Environment Umweltbehörde of Hamburg And now we are on the brink of the third conference organized together with the Karlsruhe Nuclear Research Centre Kernforschungszentrum Karlsruhe We feel honoured that the Federal Ministry for Research and Technology BMFT is again generously supporting this conference and has anew declared it a BMFT Status Seminar The conference generally referred to as Contaminated Soil 85 Contaminated Soil 88 and Contaminated Soil 90 respectively has successively gained in importance and prestige which is reflected by the increasing number of participants and contributions to the scientific programme

Bioremediation of Contaminated Soils Donald L. Wise, 2000-06-09 This volume focuses on innovative bioremediation techniques and applications for the cleanup of contaminated media and sites It includes quantitative and design methods that elucidate the relationships among various operational parameters and waste chemistry that defines the cost effectiveness of bioremediation projects It also presents numerical models

Contaminated Soils in Mexico José Guadalupe Chan-Quijano, Jesús Ignacio Castro-Salazar, José Luis Carpio-Domínguez, 2025-09-26 This book uses a green criminology lens to analyze strategies to minimize and propose alternatives on the damage caused to humans and environmental health by contaminated soils in Mexico by recognizing that the effective application of laws is crucial for the conservation of soils In this sense from the perspective of contaminated soils the compilation of data and experiences of the growing concern about the degradation of soils contaminated with hydrocarbons heavy metals pesticides and emerging contaminants organic compounds hormones and microplastics is presented In addition from environmental history the authors provide an understanding of the ontological epistemological and methodological possibilities when assessing the relationship between the natural environment and green criminology It is explained how the green cultural behavior of communities is directed in the face of soil contamination and environmental liabilities from the experiences of the subjects with respect to questioning the interaction of ethics and environmental responsibility Data is presented on the consequences of soil contamination on the loss of biodiversity and the intake and bioaccumulation of pollutants in living beings Finally the authors discuss the deficiencies related to inspection and surveillance on issues of soil contamination along with institutional proposals for remediation The book seeks to position these types of issues still scarcely discussed in Mexico for researchers academics postgraduate students decision makers and companies dedicated to the remediation and restoration of contaminated soils through sustainable management and recovery plans

KostECKI, 1992-11-30 Principles and Practices for Petroleum Contaminated Soils includes some of the best research and practical work done by top researchers in the field both in industry and academia It covers fundamental and advanced topics such as analysis and site assessment techniques e g vacuum extraction asphalt incorporation and case studies The book will interest anyone working with contaminated soils ground water and underground storage tanks It will also be a valuable reference for regulatory personnel and environmental consultants at all levels **Petroleum**

Contaminated Soils, Volume I Paul T. KostECKI, 2021-04-19 These three volumes provide valuable information to help bring rational and scientifically feasible solutions to petroleum contaminated soils State of the art information on both technical and regulatory issues is covered including environmental fate health effects risk assessment and remedial alternatives They show why petroleum contaminated soils are a problem and propose solutions for that problem These books are an excellent reference for regulatory personnel and environmental consultants at all levels *Principles and Practices for Diesel*

Contaminated Soils Paul T. KostECKI, Christopher P. L. Barkan, Edward J. Calabrese, 1997-10 **Metal-Contaminated Soils** Jaco Vangronsveld, Scott D. Cunningham, 1998-11-20 An unfortunate by product of industrialization is the contamination of soil and water resources with toxic metals which becomes an environmental concern when the concentration in soils begins to affect human health Current remediation methods applicable to contaminated soils are expensive and environmentally invasive since they are based primarily on civil engineering techniques This book represents an overview of efforts in exploiting biological and chemical processes to reduce the inherent risk associated with metal contaminated soils It presents a comprehensive up to date analysis of in situ immobilization and inactivation of toxic metals by means of plants microorganisms and invertebrates *Petroleum Contaminated Soils* Paul T. Engineered Contaminated Soils and Interaction of Soil Geomembranes Jay N. Meegoda, Luis E. Vallejo, Lakshmi N. Reddi, 1996 Due to liability issues landfills are no longer considered the best method of waste disposal Innovative safe disposal methods for large quantities of contaminated soils and waste are sought by engineers In urban or industrial areas with most of the contamination it has become very attractive to engineer contaminated soils and waste by physical or chemical methods and reuse them as construction materials This proceedings addresses the following the creation of useful products from contaminated soils and waste changes in soil or waste properties after processing logistics of the operations and the regulatory issues associated with such usage While alternative methods of disposal are being utilized civil engineers are still involved in the development of large containment systems and must continue to increase their knowledge of these systems Solid waste landfills are made of multi layered soil and geosynthetic liner systems underlying the fills and providing surface coverage to a large degree by the shear strengths developed at interfaces between the soils and the geosynthetics forming part of either the liner or the cover systems In this proceedings recent research efforts to measure the interface strength between geomembranes and soils are presented **Soil Contamination** Marcelo L. Larramendy, Sonia Soloneski, 2021-06-23 This edited book Soil Contamination Threats and Sustainable Solutions is intended to provide an update on different aspects of soil contamination exerted by a multiplicity of exogenous and endogenous causes We hope that this book will continue to increase information from diverse sources and to give some real life examples extending the appreciation of the complexity of this subject in a way that may stimulate new approaches in relevant fields
