Contemporary Architecture And The Digital Design Process:

Contemporary Architecture and the Digital Design Process Peter Szalapaj, 2014-04-23 Contemporary Architecture and the Digital Design Process introduces the reader to new developments in the computer modelling of design form in contemporary architectural practice through a series of detailed case studies The book illustrates how evolving design practices use and exploit the potential of new computing technologies in a wide range of areas and application A central thesis of this book is that technology follows design demand rather than design adjusting to available new technology Designers are not merely passive recipients of prescribed computing tools and techniques Instead they are increasingly able to express their intuitive design ideas through the rational medium of computing The book features several contemporary building projects each of which introduces a range of CAD and computing issues based upon the work of creative architectural and engineering design practices These include the offices of Frank O Gehry Peter Cook and Colin Fournier Anthony Hunt Associates Peter Hubner Szyskowitz Kowalski and Faulkner Brown All these examples show what architects need to know and the skills they need to acquire to use advanced CAD technology Digital Processes Moritz Hauschild, Rüdiger Karzel, 2012-12-10 these days a computer is as much a part of every household s standard equipment as a refrigerator and yet the explosion of computer technology in the last several decades has transformed the daily life of every member of society far more than even utopians would ever have allowed themselves to dream No wonder then that from design to production architecture too is becoming more and more subject to digital influences The range of those influences stretches from the classical computer programs used in design and presentation to media supported design processes all the way to computerized production techniques to say nothing of industrialized bricklayer robots From measurement to planning and production architecture is the product of a closely coordinated digital process chain What influence do digital design digital design and production methods have on contemporary architecture How are these methods changing architecture and the way it is created Where does the potential of digital media for architecture lie What are the areas in which every individual firm can begin to use them What are the advantages of working electronically How and at what cost can these methods be integrated into the day to day work of the professional architect This publication offers answers to these and many other questions on all aspects of the digital design and construction process **Architecture in the Digital Age** Branko Kolarevic, 2004-03 Architecture in the Digital Age addresses contemporary architectural practice in which digital technologies are radically changing how buildings are conceived designed and produced It discusses the digitally driven changes their origins and their effects by grounding them in actual practices already taking place while simultaneously speculating about their wider implications for the future The book offers a diverse set of ideas as to what is relevant today and what will be relevant tomorrow for emerging architectural practices of the digital age **Performatism** Yasha Grobman, Eran Neuman, 2013-01-11 Today with the advent of digital media technologies and the ability to conceptualize

express and produce complex forms using digital means the question of the status of the architectural form is once again under consideration Indeed the computer liberated architecture from the tyranny of the right angle and enabled the design and production of non standard buildings based on irregular geometry Yet the questions concerning the method of form expression in contemporary architecture and its meaning remain very much open Performatism takes up this discussion defines it and presents changes in form conception in architecture followed by their repercussions The book is supported by a wealth of case studies from some of the top firms across the globe and contributed to by some of the top names in this field With a unique and insightful emphasis on professional practice this is essential reading for all architects aspiring and practicing

Constructing Professional Discourse Concepción Orna-Montesinos,2012 This book explores the fascinating role that language plays in the construction of non verbal objects by mapping out the ontological meaning of the specialised concepts and the domain specific knowledge embedded in them In doing so it provides a comprehensive linguistic insight into the discourse of professional domain specific communities and hence into the communication practices and procedures of those communities In this respect the book offers a response to the claims made by many of the most influential applied linguists today such as Vijay Bhatia 1993 2004 John Swales 1990 2004 or Ken Hyland 2002 among others who have consistently defended the need for applied linguistic research into the textual generic and social perspectives on the under researched interrelatedness of the discursive and professional practices of a discipline Specifically this book provides readers with an integrative multi perspective approach to the study of professional domain specific discourses While it mainly draws on the tenets of genre theory and discourse semantics it also nurtures from the theoretical and empirical foundations of applied linguistics cognitive linguistics corpus linguistics and ontological engineering The book starts from the analysis of domain specific texts as final written products with specific lexico grammatical semantic and rhetorical features to later enquire into the written products as

textual artefacts closely linked to the social context of production and interpretation of the text This integrative approach provides fresh new insights into the way the processes of writing are affected by the community specific institutional and socio historical circumstances in which domain specific texts are produced *Exuberance* Marjan Colletti,2010-05-03 Exuberance not only celebrates new Baroque theatricality formal sophistication and digital virtuosity it also debates a plethora of joyful and intelligent ways in which experimental architecture manages to cope with the contemporary turmoil in global politics economics and ecology The title includes the work of seminal figures such as Ron Arad Peter Cook and Wolf D Prix of Coop Himmelb l au It features Hernan Diaz Alonso Evan Dougli CJ Lim Ali Rahim Neil Spiller Kjetil Thorsen of Snohetta and Tom Wiscombe Architecture, Building Materials and Engineering Management He Tao Hou,Li Tian,2013-08-08 Selected peer reviewed papers from the 2013 International Conference on Civil Architecture and Building Materials 3rd CEABM 2013 May 24 26 2013 Jinan China *Proceedings of the ACSA Annual Meeting* Association of Collegiate Schools of Architecture,2002 Cybernetic Architectures Camilo Andrés Cifuentes Quin,2021-07-29 For the past 50 years the advancements of technology have equipped architects with unique tools that have enabled the development of new computer mediated design methods fabrication techniques and architectural expressions Simultaneously in contemporary architecture new frameworks emerged that have radically redefined the traditional conceptions of design of the built environment and of the role of architects Cybernetic Architectures argues that such frameworks have been constructed in direct reference to cybernetic thinking a thought model that emerged concurrently with the origins of informatics and that embodies the main assumptions values and ideals underlying the development of computer science The book explains how the evolution of the computational perspective in architecture has been parallel to the construction of design issues in reference to the central ideas fostered by the cybernetic model It unpacks and explains this crucial relationship in the work of digital architects between the use of information technology in design and the conception of architectural problems around an informational ontology This book will appeal to architecture students and scholars interested in understanding the recent transformations in the architectural landscape related to the advent of computer based design paradigms **Modern Digital Design** Richard S. been formally and materially bound by restrictive conventional methodologies which the digital project has moved from the scale of installations to three dimensional building sized fabrications Unless architects turn to a new culture of making architecture shaped by even innovative digital technology will become irrelevant Architectural projects that are more subversive in how they are created and that lose their digital signature have greater potential to be at the forefront of the discipline s new materialisations This issue illustrates these ideas and their architectural impact Contributors Kutan Ayata Ben van Berkel Hernan Diaz Alonso David Goldblatt Thomas Heatherwick Ferda Kolatan Ascan Mergenthaler Antoine Picon Casey Rehm Patrik Schumacher and Philip F Yuan Featured architects Archi Union Contemporary Architecture Practice HDA X Heatherwick Studio Herzog de Meuron Ishida Rehm Studio Pininfarina SHoP Architects SU 11 UNStudio and Young Ayata and Zaha Hadid Architects **Books In Print 2004-2005** Ed Bowker Staff,Staff Bowker, Ed,2004
