Structural Design in Building Conservation Dimitris Theodossopoulos,2012-07-26 No building is properly conserved if it is not structurally sound Consequently architects engineers and conservation officers need an adequate grounding in the technology the materials and the historic origins of the building in order to complete a conservation project successfully Structural Design in Building Conservation deals with design issues and technical choices showing how they are integrated with the planning and architectural outcomes in a conservation project It brings together theory with current conservation technology discussing the possibilities of structural details and strategies in architectural expression Case studies are central to this and these are organised around such themes as the addition of roofs requalification of space strengthening and re use of fabric reparation additions completions stiffness adjustments and the correction of past mistakes The reader is encouraged to examine the technical details of these real projects and explore the possible solutions The philosophy of structural interventions is introduced in the context of conservation theories and practices in various European countries The main types of strengthening repairs and interventions are explained using different building types and the structural nature of the main elements to be strengthened linear structures frames plates and shells is explored in detail Case studies included cover a very wide range of historic types and conversions not only monumental masonry structures like neoclassical buildings major temples churches public buildings and museums but also more utilitarian structures like historic mills early reinforced concrete structures and vaulting types This is essential reading for all students of architectural conservation and practicing architects and engineers who are involved in conservation projects Structural Aspects of Building Conservation Poul Beckmann,Robert Bowles,2012-06-25 This practical guide to the assessment and repair of historic buildings is invaluable for structural engineers architects surveyors and builders working in all aspects of building conservation Taking a practical step by step approach the authors discuss the appraisal of buildings and the differences in structural behaviour between new and existing structures Each stage in the appraisal is explained using examples from the authors own work Each major construction material is assessed in detail with separate sections on masonry concrete timber and the particularly complex issues of iron and steel framed buildings Techniques for testing the ability of a building to continue its existing use or to be converted to a new use are explained **Conservation of Engineering Structures** Institution of Civil Engineers (Great Britain),1989 A presentation of the problems which engineers have to overcome in conserving viaducts bridges canals industrial buildings and other structures The book stresses the importance of conserving our engineering heritage covers

legal issues and provides case histories **Conservation of Engineering Structures** Institution of Civil Engineers (Great Britain),1989 **Conservation of Engineering Structures** Institution of Civil Engineers,1989 **Methodology of Highway Engineering Structural Design and Construction** Hanhua Zhu,Lei Shi,2020-09-17 This book mainly studies the methodologies of structural design and construction for highway engineering which are applicable to the overall control and the precise operation of engineering structures It explores the method of comprehensive analysis the simplification of complex problems and the application of typical engineering tools In turn the book presents a number of innovative approaches e g the coordinated control of structural deformation method the theory of underground engineering balance and stability and the soft soil foundation treatment of bumping at the bridgehead These methodologies are then illustrated in typical cases and representative problems explained from a practical standpoint Examples in special settings are also discussed e g highway construction in Tibet and rebuilding after the Wenchuan earthquake The book offers a valuable reference guide for all those whose work involves highway engineering design construction management and scientific research *Structural design* United States. Soil Conservation Service,1957 **Durability of Engineering Structures** J Bijen,2003-08-31 Civil engineering failures currently amount to 5 to 10 % of the total investment in new buildings and structures These failures not only represent important cost considerations they also have an environmental burden associated with them Structures often deteriorate because not enough attention is given during the design stage and most standards for structural design do not cover design for service life Designing for durability is often left to the structural designer or architect who may not have the necessary skills and the result is all too often failure incurring high maintenance and repair costs Knowledge of the long term behaviour of materials building components and structures is the basis for avoiding these failures Durability of engineering structures uses on the design of buildings for service life effective maintenance and repair techniques in order to reduce the likelihood of failure It describes the in situ performance of all the major man made materials used in civil engineering construction metals steel and aluminium concrete and wood In addition some relatively new high performance materials are discussed high performance concrete high performance steel and fibre reinforced polymers FRP Deterioration mechanisms and the measures to counteract these as well as subsequent maintenance and repair techniques are also considered and the latest standards on durability and repair are explained Strategies for durability maintenance and repair including life cycle costing and environmental life cycle assessment methods are discussed Finally practical case studies show how repairs can be made and the best ways of ensuring long term durability This book is aimed at students in civil engineering engineers architects contractors plant managers maintenance managers and inspection engineers Explains the reasons why structures often deteriorate before they should because of poor design Shows how to design structures effectively for service life Considers durability characteristics of standard and high performance construction materials Water Resources Research Catalog ,1966 **Ravine Lands: Greening for**

Livelihood and Environmental Security Jagdish Chander Dagar, Anil Kumar Singh, 2018-05-02 This book the only one of its kind on ravine lands reflects the significant advances made over the past two decades in our understanding of gully erosion its controlling factors and various aspects of gully erosion It also addresses central research gaps and unanswered questions which include historical studies on gully erosion to better understand the different stages of their formation appropriate measuring techniques for monitoring or assessing the geological and hydrological parameters and processes involved in gully development interaction of hydrological and other soil degradation processes ecology and biodiversity of fragile ravines impact of climate and environmental changes on soil erosion processes development of effective and reliable gully erosion models effective gully prevention and control measures watershed based management options and ravine rehabilitation policies The present book is a highly timely publication and deals with various aspects of ravine ecology and rehabilitation of degraded lands particularly with the aid of biological approaches As such it offers a valuable guide for all scientists working in the fields of soil conservation rehabilitation and agroforestry students environmentalists educationists and policymakers More importantly it focuses on the rehabilitation of one of the world s most degraded and fragile ecosystems ensuring the livelihoods of resource poor farmers and landless families living in harsh ecologies that are more vulnerable to climate change
