

MIG Welding (GMAW) Process

MIG welding is a gas shielded metal arc welding process using the heat of an electric arc between a continuously fed, consumable electrode wire and the material to be welded.

A wire of copper coated mild steel is fed continuously from a reel through a gun with a melting rate up to 5m/min.

Current through the wire ranges from 100 to 400 A depending upon the diameter of the wire.

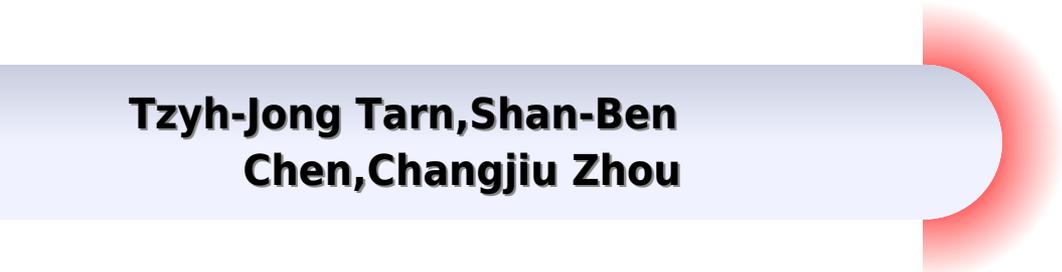

CO₂ is principally used apart from argon or argon-helium mixture as shielding gas.

Welding Processes Handbook K Weman, 2011-11-08 The first edition of Welding processes handbook established itself as a standard introduction and guide to the main welding technologies and their applications This new edition has been substantially revised and extended to reflect the latest developments After an initial introduction the book first reviews gas welding before discussing the fundamentals of arc welding including arc physics and power sources It then discusses the range of arc welding techniques including TIG plasma MIG MAG MMA and submerged arc welding Further chapters cover a range of other important welding technologies such as resistance and laser welding as well as the use of welding techniques for cutting surface cladding and hardfacing soldering and brazing A final group of chapters discuss more general issues such as mechanisation safety residual stress and distortion welding design costs and quality assurance as well as the welding of steel and aluminium The new edition of Welding processes handbook confirms its reputation as a concise authoritative and practical introduction to welding and its applications for both students and engineers It is designed to meet the requirements of Module 1 Welding processes and equipment of the International Institute of Welding IIW guidelines for the training of welding personnel at IWE IWT IWS and IWP level This new edition has been substantially revised and extended to reflect the latest developments in the main welding technologies and their applications Reviews gas welding and discusses the fundamentals of arc welding including arc physics and power sources before covering the range of arc welding techniques including TIG plasma MIG MAG MMA and submerged arc welding Examines a range of important welding technologies such as resistance and laser welding and the use of welding techniques for cutting surface cladding and hardfacing soldering and brazing

Process Pipe and Tube Welding W Lucas, 1991-05-31 The welding of tubes is an essential requirement in the fabrication of components in many industries The original idea for this book came from a seminar organized by The Welding Institute which attracted over 100 specialists concerned with design fabrication production and quality assurance and yielded a number of valuable papers Process Pipe and Tube Welding contains some of these papers together with additional chapters to provide comprehensive coverage of all aspects of tube welding from initial design considerations through production to final inspection In the first three chapters the authors outline the process and equipment options available for both manual and mechanized welding This is essential for design and production planning when faced with the choice of competing processes such as MMA MIG TIG or plasma helping engineers make the right choice for particular applications and ensuring the most cost effective welding techniques are employed Five further chapters are devoted to the application of tube welding in the aero engine ship building power generation petrochemical and chemical plant industries with numerous details on processes materials techniques and equipment The welding parameters and production data provided by the authors are a valuable source of information and will help engineers to overcome problems in production This title includes Process options and manual techniques for welding pipework fabrications Mechanised arc welding process options for

pipework fabrications Process techniques and equipment for mechanised TIG welding of tubes Welding pipes for aero engines TIG welding pipework for ships Automatic tube welding in boiler fabrication TIG and MIG welding developments for fabrication of plant for the chemical petrochemical and offshore oil and gas industries Fabrication of aluminium process pipework A fabrication system for site mechanical construction Qualification of welding procedures for the chemical process industry Non destructive examination of welds in small diameter pipes Welding Process Technology P.
