

The First Metaphysics and Current Metaphysical Concerns

Topic: Philosophy | Words: 301 | Pages: 1

The examination of metaphysical concerns is one of the principal orientations of philosophers of all times, which is complicated by differences in their approaches. Moreover, these initiatives tend to evolve with regard to preferences or vary depending on their focus. From this perspective, their examination through the lens of Pre-Socratic thinkers, sophists, Socrates, and contemporary views on the subjects is beneficial for their better understanding.

Pre-Socratic philosophers attempted to explain the nature of reality and the origin of life through materialism and spiritualism. To do so, they referred to either the four elements in the former case or the supernatural or religious underpinnings of all processes in the latter situation (Fieser). Meanwhile, the Sophists' metaphysical views on the matter also differed from those of Socrates. They considered these topics through the lens of varying beliefs, whereas the latter emphasized the moral aspect, which seemed to him more significant (Keller). These standpoints are still used by contemporary thinkers when examining metaphysical issues.

For instance, one of the trending topics of this nature is the scope of the free will of present-day people and, more particularly, the responsibility of criminals in their activity. For Socrates, it would be determined as limited by one's morality, and Sophists would likely examine it as a difference in perspectives (Payne). In turn, Pre-Socratics might see it as a problem of God's providence. Hence, the historical context matters when approaching similar complex subjects.

A First In Metaphysics:

A First Book in Metaphysics Walter Taylor Marvin, 1912 The Concept of First Philosophy and the Unity of the Metaphysics of Aristotle Richard Milton Martin, 1980-06-30 That traditional methods do not suffice was pointed out years back by Jan Salamucha in his pioneering work on the ex motu argument of St Thomas in *The New Scholasticism* XXXII 1958 but first published in 1934 Although modern logic is a comparatively young science he noted it provides us with many new and subtle tools for exact thinking To reject them is to adopt the attitude of one who stubbornly insists on traveling by stage coach though having at his disposal a train or airplane The great philosophers of the past did not rely exclusively on those weak logical tools left to them by their predecessors The very problems themselves and their own scientific genius forced them to build rational reconstructions that went far beyond those of their time A First Book in Metaphysics Walter Taylor Marvin, 2014-09-20 From the PREFACE THIS book is planned to be a student's first book in philosophy though the course which it outlines may either precede or follow a course in the history of philosophy In writing the book I have had in mind to fulfill the following three purposes First I wished the book to be simple clear and definite and as brief as possible in order that the student using it might devote by far the larger part of his time to further reading That is the book should form a system of closely connected topics an outline to be filled in by extensive outside reading and an outline to keep this reading from becoming hopelessly confusing This reading should be selected from current philosophical literature and especially from those philosophical classics which are intelligible to the beginner Secondly I wished to write not an outline of the historical development of the problems of metaphysics nor a long discussion regarding the definition and division of philosophy nor again an account of rival philosophical schools and their theories but a book in metaphysics a book representing consistently one contemporary philosophical tendency This forced the book to be partisan but I believe that the beginner demands and has the right to demand a modern philosophical creed Later he may have to outgrow this creed but in the meantime he insists upon being a partisan and takes little interest in being led through a philosophical museum Accordingly following my own philosophical convictions I have tried to formulate briefly and rigorously that type of neo realism which is a return at least to the spirit though not always to the letter of Plato and of Aristotle Lastly I wished to adapt the book especially to the Oxford or preceptorial method of instruction According to this method the text book and the lectures in class should serve to give a general view of the subject but should play a far less important part than the student's independent reading and study The results of this reading and study should be expressed in a weekly or better fortnightly essay submitted to the preceptor and afterward discussed with him in an informal conference held preferably in his private study and attended by not more than three or four students This enables the teacher to deal with his students as individuals and to vary greatly the amount and kind of reading he assigns to each Some will do not only more difficult reading than others but three or four times the amount of reading Besides being adapted especially to the use of undergraduate students

in philosophy the book is if I mistake not adapted also to the use of graduate students as an outline of a course of reading in metaphysics A few words should be added regarding the reading I have selected to which to refer the student One has to select from writings which are easily available and unfortunately as far as possible only from those in the English tongue Hence it is often a matter of good fortune to find articles or chapters which fit precisely the subject of study and which are suitable for the beginner However this responsibility will be shared with me by every instructor who uses the book for not only can he add to or select from the list of readings which I give but he can do what of course the book itself cannot do keep selecting from new articles and books as they appear My chief regret is that many of the great classics especially the logical and metaphysical writings of Aristotle are not intelligible to the beginner and therefore have had to be either omitted or assigned only for advanced reading

The Concept of First Philosophy and the Unity of the Metaphysics of Aristotle Giovanni Reale, 1980-01-01 Reale's monumental work establishes the exact dimensions of Aristotle's concept of first philosophy and proves the profound unity of concept that exists in Aristotle's *Metaphysics*. Reale's opposition to the genetic interpretation of the *Metaphysics* is an updated return to a more traditional view of Aristotle's work one which runs counter to nearly all contemporary scholarship. Reale argues that Aristotle's first philosophy includes a study of being a study of substance a study of divine substance and a study of principles and causes all of which are integrated and dialectically reconciled
