What's Happening in the Mathematical Sciences Barry Cipra, The AMS series What s Happening in the Mathematical Sciences distills the amazingly rich brew of current research in mathematics down to a few choice samples This volume leads off with an update on the Poincare Conjecture a hundred year old problem that has apparently been solved by Grigory Perelman of St Petersburg Russia So what did topologists do when the oldest and most famous problem about closed manifolds was vanquished As the second chapter describes they confronted asuite of problems concerning the ends of open manifolds and solved those too Not to be outdone number theorists accomplished several unexpected feats in the first five years of the new century from computing a trillion digits of pi to finding arbitrarily long equally spaced sequences of prime numbers Undergraduates made key discoveries as explained in the chapters on Venn diagrams and primality testing In applied mathematics the Navier Stokes equations of fluid mechanics continued to stir up interest One team proved new theorems about the long term evolution of vortices while others explored the surprising ways that insects use vortices to move around The random jittering of Brownian motion became a little less mysterious Finally an old and trusted algorithm of computer science had its trustworthiness explained in a novel way Barry Cipra explains these new developments in his wry and witty style familiar to readers of Volumes 1 5 and is joined in this volume by Dana Mackenzie Volume 6 of What s Happening will convey to all readers from mathematical novice to experts the beauty and wonder that is mathematics
