

11 Editing Patches

The MS2 comes with 24 pre-defined patches that have been programmed at the factory. However, the MS2 offers many more possibilities for creating effects in innovative ways. To discover these possibilities, first programmed effects that you try out first using functions, which let you create your own patches. The mode in which patches can be edited is called the Edit mode.

To switch from normal Play mode to Edit mode, briefly press the EDIT key. Do not keep the EDIT key depressed, because if the key is held for 1 second, the Bank Hold mode will be activated.

Immediately after switching from the Play mode to the Edit mode, the parameter cursor flashes at the highest position of COMP module, regardless of which patch was selected. The COMP module setting of the current patch is shown on the display.

While Edit mode is active, each push of the EDIT key causes the parameter cursor to move one position down. The flashing position shows which module is selected for editing. The relation between parameter cursor LEDs and modules is as shown below:

- 1st parameter cursor LED: COMP module setting
- 2nd parameter cursor LED: EQ module setting
- 3rd parameter cursor LED: EQ module setting
- 4th parameter cursor LED: ZNR and AMP module setting
- 5th parameter cursor LED: EQ module setting
- 6th parameter cursor LED: MOD module setting
- 7th parameter cursor LED: DLY/REV module setting
- 8th parameter cursor LED: DLY/REV module setting

The VALUE + (-) keys to change parameters.

For an explanation of the VALUE + (-) keys, please refer to the section "Effect Parameter". When the EDIT key is pressed while the 8th parameter cursor LED flashes, the Edit mode is cancelled and the unit returns to the Play mode.

12 Effect Parameters

| COMP module | DIST module | ZNR/AMP block | EQ module | MOD module | DLY/REV module | PATCH Level |
|--|---|--|---|--|---|---|
| Compressor The input signal down the gain is compressed to a certain level. Setting range: C 1=C9 (0.1-10) Higher values result in stronger compression. | Distortion Type A total of eight effect types are available, including seven different distortion types and one effect which produces a sound similar to an electric acoustic guitar. RC (overdrive) Gives a sound similar to an electric acoustic guitar. DI (diagonal) Gives slight distortion when strings are picked strongly. DI (diagonal) Distorted overdrive during a full amp. DI (diagonal) Hard distortion similar to driving a three-stack amp. DI (diagonal) Overdrive sound with a low gain. DI (diagonal) Crisp tone sound with full bass. DI (diagonal) Bright and harsh distortion. DI (diagonal) Sounding like a rock sound. Distortion Gain Sets the intensity and the depth of the distortion effect. Setting range: F 1=30 (0-100) | ZNR module Parameters for settings for ZNR (Noise Reduction). AMP module Modulates the wave characteristics of a guitar amplifier. Both modules together form the ZNR/AMP block. Setting range: 0=0-9 (0-10) Higher values result in more effect. The value shown on the display indicates the highest setting that will maintain the instrument signal without distortion. R 1=RS (0.1-100) All Amp simulator only is active. R 1=AS (0.1-100) to also used. Higher values result in more effective noise reduction. | Sound EQ Allows boost and cut in the presence, high, midrange, and low range. Setting range: 1=10 (0-100) Lower values result in a stronger high-range cut and low-range boost. 2=20 (0.1-100) Lower values result in a stronger presence-in-range boost. 3=30 (0.1-100) Flange rate frequency response. 4=40 (0.1-100) Higher values result in a higher boosted frequency response. 5=50 (0.1-100) Higher values result in a stronger presence cut and low-range boost, giving a more "baked" sound. | Chorus Simply 2 phase chorus without any compression with pitch modulation. Suitable for enhancing a clean sound. Setting range: C 1=C9 (0.1-10) Higher values result in a stronger chorus effect. Flanger Adds a very short delay to the input signal and mixes the delay back periodically, resulting in a pronounced "swoosh" effect. Can also be used together with the other effects. Setting range: F 1=FS (0.1-100) Higher values result in faster flanger modulation. Flanger and chorus can be used together. Higher values result in faster flanger modulation. | Delay Can control digital delay with a delay time of up to 750 ms. By increasing the effect on screen, you can achieve a ping-pong delay. Setting range of 1=10 (0.1-100) Higher values result in longer delay time. Mod feedback is also optimized. Half Reverse Reverses the direction of a hall. Setting range: H 1=HS (0.1-100) Higher values result in longer reverb time. Mod setting is also optimized. Room Reverb Reverses the direction of a room. Setting range: R 1=RS (0.1-100) Higher values result in longer reverb time. Mod setting is also optimized. | Patch Level Allows setting the level of individual patches. This setting is used for each patch like the effect parameter. Setting range: 1=30 (0-100) Higher values result in higher level. |

1 Selecting parameters to change

As illustrated in "Editing Effect", parameters to be edited are selected by repeatedly pressing the EDIT key. Do not keep the key pressed.

2 Effect module on/off switching

When editing the parameter of an effect module, you can turn the effect module on or off. The ZNR and AMP modules are turned on and off together. When switching on/off modules, you must do this by using the parameter setting display.

3 Using the VALUE + (-) keys

When using the VALUE + (-) keys to change the parameter value of the "effect" module, the parameter value of the "effect" module will be shown on the display. The value of the "effect" module will be shown on the display. The value of the "effect" module will be shown on the display. The value of the "effect" module will be shown on the display.

4 Parameter setting shortcut

Normally, parameter values are set by tapping the VALUE + (-) key once for each parameter. In order to allow quick operation to effect modules which contain more than one effect, you can use the shortcut function which is available for each effect. Press the VALUE + (-) key once for each effect. If you are concerned about the "Effect" parameter of the ZNR/AMP module, the shortcut function is not available for the ZNR/AMP module. However, you can use the shortcut function for the ZNR/AMP module and the ZNR/AMP module.

5 Volume control with FPO3

When the optimal parameter value of FPO3 is set, you can also control the output volume of the MS2. However, if the FPO3 module parameter is set to a value which causes a patch to be off, this setting has priority and the effect is not active. In other words, the patch volume will be reduced. The EQ module and the ZNR/AMP module are represented in volume parameter and effect the MS2. The level of the additional volume effect is the same as the volume of the patch and delay effect.

6 Master level adjustment

The MS2 also has a master level control. The master level control is represented by the patch level. The master level control is represented by the patch level. The master level control is represented by the patch level. The master level control is represented by the patch level.
