*Buoyancy Effects in Fluids* John Stewart Turner, 1979-12-20 The phenomena treated in this book all depend on the action of gravity on small density differences in a non rotating fluid The author gives a connected account of the various motions which can be driven or influenced by buoyancy forces in a stratified fluid including internal waves turbulent shear flows and buoyant convection This excellent introduction to a rapidly developing field first published in 1973 can be used as the basis of graduate courses in university departments of meteorology oceanography and various branches of engineering This edition is reprinted with corrections and extra references have been added to allow readers to bring themselves up to date on specific topics Professor Turner is a physicist with a special interest in laboratory modelling of small scale geophysical processes An important feature is the superb illustration of the text with many fine photographs of laboratory experiments and natural phenomena

**Heat Transfer to Non-Newtonian Fluids** Aroon Shenoy, 2017-11-17 This book has been written with the idea of providing the fundamentals for those who are interested in the field of heat transfer to non Newtonian fluids It is well recognized that non Newtonian fluids are encountered in a number of transport processes and estimation of the heat transfer characteristics in the presence of these fluids requires analysis of equations that are far more complex than those encountered for Newtonian fluids A deliberate effort has been made to demonstrate the methods of simplification of the complex equations and to put forth analytical expressions for the various heat transfer situations in as vivid a manner as possible The book covers a broad range of topics from forced natural and mixed convection without and with porous media Laminar as well as turbulent flow heat transfer to non Newtonian fluids have been treated and the criterion for transition from laminar to turbulent flow for natural convection has been established The heat transfer characteristics of non Newtonian fluids from inelastic power law fluids to viscoelastic
