Have you ever heard of a Hype Cycle It is a description that was put forward by an IT consultancy firm to describe certain phenomena that happen within the life cycle of new technology products As Fenn and Raskino stated in their book Fenn and Raskino 2008 a novel technology a Technology Trigger gives rise to a steep increase in interest leading to the Peak of Inflated Expectations Following an accumulation of more detailed knowledge on the technology and its shortcomings the stakeholders may need to traverse a Trough of Disillusionment which is followed by a shallower Slope of Enlightenment before finally reaching the Plateau of Productivity In spite of the limitations and criticisms levied on this oversimplified description of a technology s life cycle it is nonetheless able to describe well the situation we are all experiencing within the brain machine interfacing community Our technology trigger was the development of batch processed multisite neuronal interfaces based on silicon during the 1980s and 1990s Sangler and Wise 1990 Campbell Jones et al 1991 Wise and Najafi 1991 Rousche and Normann 1992 Nordhausen Maynard et al 1996 This gave rise to a seemingly exponential growth of knowledge within the neurosciences leading to the expectation of thought controlled devices and prostheses for handicapped people in the very near future Chapin Moxon et al 1999 Wessberg Stambaugh et al 2000 Chapin and Moxon 2001 Serruya Hatsopoulos et al 2002 Unfortunately whereas significant steps towards artificial robotic limbs could have been implemented during the last decade Johannes Bigelow et al 2011 Oung Pohl et al 2012 Belter Segil et al 2013 direct invasive intracortical interfacing was not quite able to keep up with these expectations Insofar we are currently facing the challenging but tedious walk through the Trough of Disillusionment Undoubtedly more than two decades of intense research on brain machine interfaces BMI s have produced a tremendous wealth of information towards the ultimate goal a clinically useful cortical prosthesis

Unfortunately even today after huge fiscal efforts the goal seems almost to be as far away as it was when it was originally put forward At the very least we have to state that one of the main challenges towards a clinical useful BMI has not been sufficiently answered yet regarding the long term or even truly chronic stability of the neural cortical interface as well as the signals it has to provide over a significant fraction of a human s lifespan Even the recently demonstrated advances in BMI s in both humans and non human primates have to deal with a severe decay of spiking activity that occurs over weeks and months Chestek Gilja et al 2011 Hochberg Bacher et al 2012 Collinger Kryger et al 2014 Nuyujukian Kao et al 2014 Stavisky Kao et al 2014 Wodlinger Downey et al 2014 and resolve to simplified features to keep a brain derived communication channel open Christie Tat et al 2014
