Ibragimov, 1979-01-01 This title presents an introduction to the classical treatment of Backlund and general surface transformations and includes detailed and accessible techniques for constructing both groups of transformations which will be of great value to the scientist and engineer in the analysis of mathematical models of physical phenomena Classical and recent examples of Backlund transformations as applied to geometry nonlinear optics turbulence models nonlinear waves and quantum mechanics are given The authors discuss applications of Lie Backlund transformations in mechanics quantum mechanics gas dynamics hydrodynamics and relativity

Bäcklund Transformations, the Inverse Scattering Method, Solitons, and Their Applications Robert M. Miura, 1976 **Backlund Transformations** Robert M. Miura, 1976 **Backlund Transformations, the Inverse Scattering Method, Solitons, and Their Applications** Robert M. Miura, 1974 *Local Jet Bundle Formulation of Bäcklund Transformations* F.A.E. Pirani, D.C. Robinson, W.F. Shadwick, 2012-12-06 The aim of this paper is to show that the theory of jet bundles supplies the appropriate setting for the study of Backlund transformations These transformations are used to solve certain partial differential equations particularly non linear evolution equations Of course jets have been employed for some time in the theory of partial differential equations but so far little use has been made of them in applications In the meanwhile substantial progress has been made in the study of non linear evolution equations This work has been encouraged by the discovery of remarkable properties of some such equations for example the existence of soliton solutions and of infinite sequences of conservation laws Among the techniques devised to deal with these equations are the inverse scattering method and the Backlund transformation In our opinion the jet bundle formulation offers a unifying geometrical framework for understanding the properties of non linear evolution equations and the techniques used to deal with them although we do not consider all of these properties and techniques here The relevance of the theory of jet bundles is that it legitimates the practice of regarding the partial derivatives of field variables as independent quantities Since Backlund transformations require from the outset manipulation of these partial derivatives and repeated shifts of point of view about which variables are dependent on which this geometrical setting clarifies and simplifies the concepts involved and offers the prospect of bringing coherence to a variety of disparate results **Backlund Transformations, the Inverse Scattering Method, Solitons, and Their Applications : Papers** Robert M. NATIONAL SCIENCE FOUNDATION., *Bäcklund Transformations, the Inverse Scattering Method, Solitons, and Their Applications* Martin L. Silverstein,1976 *Bäcklund and Darboux Transformations* A. A. Coley,2001 This book is devoted to a classical topic that has undergone rapid and fruitful development over the past 25 years namely Backlund and Darboux transformations and their applications in the theory of integrable systems also known as soliton theory The book consists of two parts The first is a series of introductory pedagogical lectures presented by leading experts in the field They are devoted respectively to Backlund transformations of Painleve equations to the dressing method and Backlund and Darboux transformations and to the classical geometry of Backlund transformations and their applications to soliton theory The second part contains original contributions that represent new developments in the theory and applications of these transformations Both the introductory lectures and the original talks were presented at an International Workshop that took place in Halifax Nova Scotia Canada This volume covers virtually all recent developments in the theory and applications of Backlund and Darboux transformations **Bäcklund and Darboux Transformations** C. Rogers,W. K. Schief,2002-06-24

This book explores the deep and fascinating connections that exist between a ubiquitous class of physically important waves known as solitons and the theory of transformations of a privileged class of surfaces as they were studied by eminent geometers of the nineteenth century Thus nonlinear equations governing soliton propagation and also mathematical descriptions of their remarkable interaction properties are shown to arise naturally out of the classical differential geometry of surfaces and what are termed Backlund Darboux transformations This text the first of its kind is written in a straightforward manner and is punctuated by exercises to test the understanding of the reader It is suitable for use in higher undergraduate or graduate level courses directed at applied mathematicians or mathematical physics **Perspectives of Nonlinear Dynamics: Volume 2** E. Atlee Jackson,1989 The dynamics of physical chemical biological or fluid systems generally must be described by nonlinear models whose detailed mathematical solutions are not obtainable To understand some aspects of such dynamics various complementary methods and viewpoints are of crucial importance The presentation and style is intended to stimulate the reader's imagination to apply these methods to a host of problems and situations

The Painlevé Handbook Robert Conte,Micheline Musette,2020-11-07 This book now in its second edition introduces the singularity analysis of differential and difference equations via the Painlevé test and shows how Painlevé analysis provides a powerful algorithmic approach to building explicit solutions to nonlinear ordinary and partial differential equations It is illustrated with integrable equations such as the nonlinear Schrödinger equation the Korteweg de Vries equation Hénon Heiles type Hamiltonians and numerous physically relevant examples such as the Kuramoto Sivashinsky equation the Kolmogorov Petrovski Piskunov equation and mainly the cubic and quintic Ginzburg Landau equations Extensively revised

updated and expanded this new edition includes recent insights from Nevanlinna theory and analysis on both the cubic and quintic Ginzburg Landau equations a close look at physical problems involving the sixth Painlevé function and an overview of new results since the book's original publication with special focus on finite difference equations The book features tutorials appendices and comprehensive references and will appeal to graduate students and researchers in both mathematics and the physical sciences

Nonlinear Equations in the Applied Sciences W. F. Ames, 1991-08-16 Nonlinear Equations in the Applied Sciences

Integrable Hamiltonian Hierarchies Vladimir Gerdjikov, Gaetano Vilasi, Alexandar Borisov Yanovski, 2008-12-02 This book presents a detailed derivation of the spectral properties of the Recursion Operators allowing one to derive all the fundamental properties of the soliton equations and to study their hierarchies

Perspectives of Nonlinear Dynamics: Volume 1 E. Atlee Jackson, 1989 The dynamics of physical chemical biological or fluid systems generally must be described by nonlinear models whose detailed mathematical solutions are not obtainable To understand some aspects of such dynamics various complementary methods and viewpoints are of crucial importance In this book the perspectives generated by analytical topological and computational methods and interplays between them are developed in a variety of contexts This book is a comprehensive introduction to this field suited to a broad readership and reflecting a wide range of applications Some of the concepts considered are topological equivalence embeddings dimensions and fractals Poincaré maps and map dynamics empirical computational sciences vis vis mathematics Ulam's synergetics Turing's instability and dissipative structures chaos dynamic entropies Lorenz and Rössler models predator-prey and replicator models FPU and KAM phenomena solitons and nonsolitons coupled maps and pattern dynamics cellular automata
