Atomic Collisions Earl W. McDaniel, Brian Mitchell, Eugene Rudd, 1993-04-01 *Atomic Collisions* Earl W. McDaniel, J. B. A. Mitchell, M. Eugene Rudd, 1993-05-10 Deals with elastic inelastic and reactive collisions between heavy particles The impact energy range extends from sub thermal to energies at which nuclear forces become significant Although the focus is on experiment theory is integrated with experimental discussions Scattering resonances beam monochromators particle detectors coincidence measurements and laser photodetachment are among the topics covered Includes extensive references and problem sets *Atomic Collisions* Earl W. McDaniel, 1989 **Springer Handbook of Atomic, Molecular, and Optical Physics** Gordon W. F. Drake, 2007-02-05 This Springer Handbook comprises a comprehensive reference source that unifies the entire fields of atomic molecular and optical AMO physics assembling the principal ideas techniques and results of the field Its 90 chapters written by about 120 authors all leaders in their respective disciplines together with a guide to the primary research literature It has been carefully edited to ensure a uniform coverage and style with extensive cross references It is intended to be both a source of information and inspiration for graduate students and other researchers new to the field Along with a summary of key ideas techniques and results many chapters offer diagrams of apparatus graphs and tables of data From atomic spectroscopy to applications in comets one finds contributions from over 100 authors all leaders in their respective disciplines Substantially updated and expanded since the original 1996 edition it now contains several entirely new chapters covering current areas of great research interest that barely existed in 1996 such as Bose Einstein condensation quantum information and cosmological variations of the fundamental constants A fully searchable CD ROM version of the contents accompanies the handbook **Atomic Collisions** Earl W. McDaniel, 1989-09-25 Dealing mainly with collisions of electrons and photons with heavy particles Atomic Collisions discusses electron electron and photon electron collisions The energy range covered extends from a few meV up to a few MeV excluding collisions in which nuclear forces are important Emphasis is on the mechanisms by which the various collisions take place almost all of the scattering approximations used in atomic collision theory are considered Topics covered include scattering resonances coincidence measurements merged beam experiments positron collisions collisions between spin polarized particles GaAs polarized electron sources position sensitive detection synchrotron radiation sources cyclotron resonance masers laser cooling and trapping multiphoton processes and more The exposition is relatively self contained and includes end of chapter notes and more than 200 problems [Atomic and Molecular Processes in Fusion Edge Plasmas](#) R.K. Janev, 2013-06-29 This well illustrated resource provides vital cross section information for the atomic and molecular collision processes taking place in the boundary region of magnetically confined fusion plasmas and in other laboratory and astrophysical low temperature plasmas The expertly assessed information in this noteworthy volume includes the most recent experimental and theoretical results presented in a convenient format Coverage includes the processes of electron impact excitation and ionization of
