**Atomic, Molecular, and Optical Physics: Charged Particles**, 1995-11-29 With this volume *Methods of Experimental Physics* becomes *Experimental Methods in the Physical Sciences* a name change which reflects the evolution of today's science This volume is the first of three which will provide a comprehensive treatment of the key experimental methods of atomic molecular and optical physics the three volumes as a set will form an excellent experimental handbook for the field The wide availability of tunable lasers in the past several years has revolutionized the field and led to the introduction of many new experimental methods that are covered in these volumes Traditional methods are also included to ensure that the volumes will be a complete reference source for the field [Atomic, Molecular, and Optical Physics](#) F. **Molecular Processes in Plasmas** Yukikazu Itikawa, 2007-07-19 A variety of plasmas include molecules rather than only ions or atoms Examples are ionospheres of the Earth and other planets stellar atmospheres gaseous discharges for use in various devices and processes and fusion plasmas in the edge region This book describes the role of molecules in those plasmas by showing elementary collision processes involving those molecules All possible processes are presented both for electron and ion collisions with the molecules On the basis of the accumulated knowledge in atomic and molecular physics a compact but informative description is given for each process Specific emphasis is placed on the feature which application people often tend to overlook **Fundamentals of Charged Particle Transport in Gases and Condensed Matter**

Robert Robson, Ronald White, Malte Hildebrandt, 2017-09-27 This book offers a comprehensive and cohesive overview of transport processes associated with all kinds of charged particles including electrons ions positrons and muons in both gases and condensed matter The emphasis is on fundamental physics linking experiment theory and applications In particular the authors discuss The kinetic theory of gases from the traditional Boltzmann equation to modern generalizations A complementary approach Maxwell's equations of charge and fluid modeling Calculation of ion atom scattering cross sections Extension to soft condensed matter amorphous materials Applications drift tube experiments including the Franck Hertz experiment modeling plasma processing devices muon catalyzed fusion positron emission tomography gaseous radiation detectors Straightforward physically based arguments are used wherever possible to complement mathematical rigor Robert Robson has held professorial positions in Japan the USA and Australia and was an Alexander von Humboldt Fellow at several universities in Germany He is a Fellow of the American Physical Society Ronald White is Professor of Physics and Head of Physical Sciences at James Cook University Australia Malte Hildebrandt is Head of the Detector Group in the Laboratory of Particle Physics at the Paul Scherrer Institut Switzerland **Polarization, Alignment, and Orientation in Atomic Collisions** Nils Andersen, Klaus Bartschat, 2017-08-02 This book covers polarization alignment and orientation effects in atomic collisions induced by electron heavy particle or photon impact The first part of the book presents introductory

chapters on light and particle polarization experimental and computational methods and the density matrix and state multipole formalism Examples and exercises are included The second part of the book deals with case studies of electron impact and heavy particle excitation electron transfer impact ionization and autoionization A separate chapter on photo induced processes by new generation light sources has been added The last chapter discusses related topics and applications Part III includes examples of charge clouds and introductory summaries of selected seminal papers of tutorial value from the early history of the field 1925 1975 The book is a significant update to the previous first edition particularly in experimental and computational methods the inclusion of key results obtained during the past 15 years and the extended coverage of photo induced processes It is intended as an introductory text for both experimental and theoretical students and researchers It can be used as a textbook for graduate courses as a primary source for special topics and seminar courses and as a standard reference The book is accompanied by electronically available copies of the full text of the key papers in Part III as well as animations of theoretically predicted electron charge clouds and currents for some of the cases discussed in Part II
