The Handbook of Information Security is a definitive 3 volume handbook that offers coverage of both established and cutting edge theories and developments on information and computer security. The text contains 180 articles from over 200 leading experts providing the benchmark resource for information security, network security, information privacy and information warfare.

Digital Communication V.K.Khanna, 2009
This textbook is for undergraduate students of electronics and telecommunication engineering and allied disciplines as well as diploma and science courses. This book offers an introductory survey of the conceptual development of the subject. It provides simple and lucid presentations of the essential principles, formulae and definitions of Digital Communications.

Core Networks and Network Management D. W. Faulkner, Alan Harmer, 1999
WDM Networks and Systems Network Planning and Management
The demand for ever more capacity over the lucrative long haul routes coupled with the need for higher reliability is pushing optical technology towards its limits. WDM systems allow upgrading of existing core networks and offer new opportunities for long haul systems design towards ultimate terabit systems. The prospect of an all optical layer offers new possibilities for dynamic management of capacity and protection switching.

Papers published in these proceedings explore business opportunities for WDM systems. Highlight recent advances in key technologies such as add drop multiplexers, arrayed planar waveguides and broadband EDFAs. Present new bandwidth management techniques. Push the transmission limits to the technology by minimising dispersion, non linearities and intermodulation effects and charts the way to soliton systems.

Visual Information Systems Clement Leung, 1997-09-29
This book is a thoroughly arranged anthology outlining the state of the art in the emerging area of visual information systems. The chapters presented are a selection of thoroughly refereed and revised full papers first presented at the First International Conference on Visual Information Systems held in February 1996. Next generation information systems have a high visual content and there will be a shift in emphasis from a paradigm of predominantly alphanumeric data processing to one of visual information processing. The book provides a detailed introductory chapter, two keynote addresses by leading authorities, sections on design and architecture, database management and modelling, content based search and retrieval, feature extraction and indexing, query model and interface and object recognition and content organization.
