Defect Relation Of Meromorphic Maps On Parabolic Manifolds:

The Defect Relation of Meromorphic Maps on Parabolic Manifolds George Lawrence Ashline, 1999 This book is intended for graduate students and research mathematicians working in several complex variables and analytic spaces [The Defect Relation for Meromorphic Maps Defined on Covering Parabolic Manifolds](#) Emmanuel Theodore Bardis, 1990 **Cartan's Conjecture** Wanxi Chen, 1987 [Value Distribution Theory for Meromorphic Maps](#) Wilhelm Stoll, 2013-06-29 Value distribution theory studies the behavior of meromorphic maps Let $f: M \rightarrow N$ be a meromorphic map between complex manifolds A target family $\{E_a\}$ of analytic subsets E_a of N is given where A is a connected compact complex manifold The behavior of the inverse image family $f^{-1}(E_a)$ is investigated A substantial theory has been created by many contributors Usually the targets E_a stay fixed However we can consider a finite set $\{g_j\}$ of meromorphic maps $g_j: M \rightarrow A$ and study the incidence $f(z) \in E_a, g_j(z) \in E_b$ for $z \in M$ and some $g_j \in \{g_j\}$ Here we investigate this situation M is a parabolic manifold of dimension m and $N = \mathbb{P}^n$ is the n dimensional projective space The family of hyperplanes in \mathbb{P}^n is the target family parameterized by the dual projective space \mathbb{P}^n We obtain a Nevanlinna theory consisting of several First Main Theorems Second Main Theorems and Defect Relations and extend recent work by B Shiffman and by S Mori We use the Ahlfors Weyl theory modified by the curvature method of Cowen and Griffiths The Introduction consists of two parts In Part A we sketch the theory for fixed targets to provide background for those who are familiar with complex analysis but are not acquainted with value distribution theory

[Geometry V](#) Robert Osserman, 2013-03-14 Few people outside of mathematics are aware of the varieties of mathematical experience the degree to which different mathematical subjects have different and distinctive flavors often attractive to some mathematicians and repellant to others The particular flavor of the subject of minimal surfaces seems to lie in a combination of the concreteness of the objects being studied their origin and relation to the physical world and the way they lie at the intersection of so many different parts of mathematics In the past fifteen years a new component has been added the availability of computer graphics to provide illustrations that are both mathematically instructive and esthetically pleasing During the course of the twentieth century two major thrusts have played a seminal role in the evolution of minimal surface theory The first is the work on the Plateau Problem whose initial phase culminated in the solution for which Jesse Douglas was awarded one of the first two Fields Medals in 1936 The other Fields Medal that year went to Lars V Ahlfors for his contributions to complex analysis including his important new insights in Nevanlinna Theory The second was the innovative approach to partial differential equations by Serge Bernstein which led to the celebrated Bernstein's Theorem stating that the only solution to the minimal surface equation over the whole plane is the trivial solution a linear function [Nevanlinna Theory And Its Relation To Diophantine Approximation \(Second Edition\)](#) Min Ru, 2021-03-10 This book describes the theories and developments in Nevanlinna theory and Diophantine approximation Although these two subjects belong to the different areas one in complex analysis and one in number theory it has been discovered that a number of striking similarities exist

between these two subjects A growing understanding of these connections has led to significant advances in both fields Outstanding conjectures from decades ago are being solved Over the past 20 years since the first edition appeared there have been many new and significant developments The new edition greatly expands the materials In addition three new chapters were added In particular the theory of algebraic curves as well as the algebraic hyperbolicity which provided the motivation for the Nevanlinna theory
