qualitative analyzes in this book reveal that large scale uptake of capture and storage technologies is probably 10 years off and that without a major increase in RD D investment the technology will not be in place to realize its full potential in the coming decades Effective emission reduction incentives will be needed to achieve market deployment from 2015 onward Additional policies will have to be implemented to remove barriers and reduce uncertainties If the right action is taken CCS could become an essential transition technology to a sustainable energy system for the next 50 to 100 years Public Utilities Law Anthology ,1980
