**Deep Foundations 2002** Michael W. O'Neill, Frank C. Townsend, 2002 Proceedings of the International Deep Foundations Congress 2002 held in Orlando Florida February 14 16 2002 Sponsored by The Geo Institute of ASCE This Geotechnical Special Publication contains 110 papers documenting applied research and engineering experience in the area of deep foundations The volume is a comprehensive resource for both researchers and practitioners covering driven jacked and augered piles and drilled shafts Topics include geotechnical design structural design innovative construction validation and verification of design and construction soil structure interaction reliability based design field load testing for design concepts for deep foundation systems such as piled rafts numerical and analytical modeling of pile foundations design of foundations for extreme events and numerous and varied case histories Several papers also focus on the acquisition and use of geomaterial properties for deep foundation design and the use of deep foundations in walls Deep Foundations 2002, 2002 **The Time Factor in Design and Construction of Deep Foundations** Deep Foundations Institute. Conference, 2002 **Current Practices and Future Trends in Deep Foundations** Jerry A. DiMaggio, Mohamad H. Hussein, 2004 GSP 125 contains 26 papers on state of the art developments in deep foundation collected in honor of George G Goble Ph D P E The Application of Stress-wave Theory to Piles Jaime Alberto dos Santos, 2008 This volume contains 101 papers presented at the 8th International Conference on the Application of Stress Wave Theory to Piles held in Lisbon Portugal in 2008 It is divided in 14 chapters according to the conference themes Wave mechanics applied to pile engineering Relationship between static resistance to driving and long term static soil resistance Case histories involving measurement and analysis of stress waves Dynamic monitoring of driven piles Dynamic soil pile interaction models numerical and physical modeling High strain dynamic test Low strain dynamic test Rapid load test Monitoring and analysis of vibratory driven piles Correlation of dynamic and static load tests Quality assurance of deep foundations using dynamic methods Incorporation of dynamic testing into design codes and testing standards Ground vibrations induced by pile motions Dynamic measurements in ground field testing This conference aims to contribute to a better and more efficient professional interaction between specialized contractors designers and academicians By joining the contribution of all of them it was possible to elucidate the today's state of the art in science technology and practice in the application of stress wave theory to piles **BOOK JACKET** *Advances in Designing and Testing Deep Foundations* Michael W. O'Neill, 2005 *Advances in Designing and Testing Deep Foundations* contains 25 papers on designing constructing and testing various types of piles and piled rafts This Geotechnical Special Publication No 129 honors the late Professor Michael W O Neill Ph D P E a distinguished educator and researcher who made significant contributions toward the advancement of the state of the art and state of the practice of deep foundations Professor O Neill played a critical role in investigating the load transfer mechanisms of various types of piles in soils and rocks and was internationally known for his work on drilled shafts augered

piles and field testing of various types of piles This publication is an effective means of sharing the advances in deep foundations with practitioners researchers and designers

**Nondestructive Testing of Deep Foundations** Bernhardt H. Hertlein, Bernard Hertlein, Allen Davis, 2006-08-25 Nondestructive Testing involves the use of methods such as wave propagation electromagnetism electrical conductivity and thermal conductivity to test structural integrity and thereby allow nondestructive assessment of structures and the possibility of structural failures before they occur Nondestructive Testing of Deep Foundations covers different techniques designed to provide information about the integrity and quality of the material that makes up a deep foundation Nondestructive Testing methods are used at all stages of a structure s life from new construction quality control to residual lifetime prediction and even during the monitoring of demolition In addition Nondestructive Testing is being increasingly specified in deep foundation projects though often without a good understanding of its limitations and with the result that methods are often misused In order to be able to specify an appropriate method or to recognize an inappropriate specification it is necessary for the engineer specifier and or contractor to understand the capabilities and limitations of each of the methods currently in use Nondestructive Testing of Deep Foundations Describes the most commonly used deep foundation construction techniques including typical use of material Provides a brief history of the development of commercially available nondestructive methods Summarises each method s capabilities and limitations Acts as a one stop reference drawing together resources only previously available in conference proceedings and journal papers This manual will prove to be a welcome addition to the bookshelf of all practitioners in civil structural and geotechnical engineering and architecture It will also provide a valuable insight into this highly technical field for university researchers lecturers and postgraduate students in civil structural and geotechnical engineering

**The Foundation Engineering Handbook** Manjriker Gunaratne, 2013-11-26 Considering how structures interact with soil and building proper foundations is vital to ensuring public safety and to the longevity of buildings Understanding the strength and compressibility of subsurface soil is essential to the foundation engineer The Foundation Engineering Handbook Second Edition provides the fundamentals of foundation e
