1. Presentación

Querido estudiante, usted debe conocer mucho sobre la economía y los conceptos básicos que aprendió durante su etapa preuniversitaria. Ahora que ha llegado aquí, déjense decirle que aprendió lo justo y necesario para afrontar todo lo que conlleva detrás de la ciencia económica. Sabemos que la ciencia económica es una ciencia social porque busca comprender la realidad de las sociedades. Específicamente, esta ciencia busca explicar nuestro comportamiento frente a los recursos escasos y cómo la sociedad actúa y se organiza para poder satisfacer sus múltiples necesidades. Esta ciencia busca explicar estas múltiples cuestiones, pero necesita herramientas para poder llevar a cabo su objetivo. Es ahí donde aparece el conocimiento científico.

Esta ciencia tiene la complejidad de que las sociedades están en constante evolución y cada sociedad se organiza de una manera distinta. Además, es necesario comprender que cada individuo actúa de manera diferente al momento de tomar sus decisiones. Es sorprendente el hecho de que esta ciencia debe hacer generalizaciones para poder entender este mundo complejo. Un ejemplo que más adelante podrá escuchar es el de la ciencia geográfica y las escalas que utiliza. Imaginemos que utilizara una escala del mismo tamaño que la Tierra; esto sería inútil para poder realizar sus interpretaciones. Lo mismo ocurre en la ciencia económica: esta debe hacer reducciones en cuanto a su estudio, que son los supuestos de la teoría.

Por otro lado, la ciencia económica busca explicar ciertos procesos que se repiten constantemente en la sociedad, como es el proceso económico. Esto permite entender y, después, aplicar políticas que, más adelante, podrán notarse con mayor claridad en ejemplos.

Este manual tiene como propósito explicar cómo la ciencia económica llega a explicar la realidad, basándose en el conocimiento científico y mostrando uno de los muchos métodos que se pueden utilizar dentro de esta ciencia. En esta ocasión, buscará explicar la metodología Alfa y Beta, planteada por el economista Adolfo Figueroa con la ayuda de la epistemología popperiana. Este método es utilizado en las ciencias sociales para hacer teoría, y más adelante explicaremos cómo

But most architects and other design and construction professionals are not professional writers. Instead they are people who spend a large part of their professional lives writing. That's a big difference and that's where this book will help. The Architect's Guide to Writing has been written not by an English major but by Bill Schmalz, an architect who knows the kinds of documents his fellow professionals routinely have to write and understands the kinds of technical mistakes they often make in their writing. This book is designed to meet the specific needs of design and construction professionals. It's not going to waste their time with the things that most educated professionals know but it will help them with the things they don't know or are unsure of. It's not a Chicago Manual sized encyclopaedic reference that includes everything any writer would ever need to know because architects don't need to know everything. But what they do need to know and what they use every day in their professional lives has been assembled in this book.
