When multiple forces act on an object, they combine to produce a net force, which determines whether the object speeds up, slows down, or changes direction. Understanding how forces act together is essential to explaining everyday observations, from a ball being kicked to a rocket launching into space.</p> <p>Newton's second law of motion states that the acceleration of an object is directly proportional to the net force acting on it and inversely proportional to its mass. This means that if the net force increases, the acceleration increases proportionally, but if the mass also increases, the acceleration will decrease. For example, pushing a heavy box with a small force will result in a small acceleration, while pushing a lighter box with the same force will result in a larger acceleration.</p> <p>Newton's first law of motion, also known as the law of inertia, states that an object at rest will stay at rest, and an object in motion will continue moving at a constant velocity unless acted upon by a net external force. This means that objects will only change their motion if a net force is applied to them. For example, a car will only change its direction if a net force is applied to it, such as the steering wheel or the brakes.</p> </div> <p>Answer the questions that follow.</p> <ol style="list-style-type: none"> Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force <div style="text-align: right;">  </div>
