Current Challenges in Cardiovascular Molecular Diagnostics Matteo Vatta, Valeria Novelli, Luisa Mestroni, Jeffrey A. Towbin, Carlo Napolitano, Guia Guffanti, 2017-09-12 The field of cardiovascular genetics has tremendously benefited from the recent application of massive parallel sequencing technology also referred to as next generation sequencing NGS However along with the discovery of additional genes associated with human cardiac diseases the analysis of large dataset of genetic information uncovered a much more complex and variegated landscape which often departs from the comfort zone of the monogenic Mendelian diseases image that clinical molecular geneticists have been well acquainted with for many decades It is now clear that in addition to highly penetrant genetic variants which in isolation are able to recapitulate the full clinical presentation when expressed in animal models we are now aware that a small but significant fraction of subjects presenting with cardiac muscle diseases such as cardiomyopathies or primary arrhythmias such as long QT syndrome LQTS may harbor at least two deleterious variants in the same gene compound heterozygous or in different gene double heterozygous Although the clinical presentation in subjects with more than one deleterious variant appears to be more severe and with an earlier

disease onset it somehow changes the viewpoint of clinical molecular geneticists whose aim is to identify all possible genetic contributors to a human condition In this light the employment in clinical diagnostics of the NGS technology allowing the simultaneous interrogation of a DNA target spanning from large panel of genes up to the entire genome will definitely aid at uncovering all such contributors which will have to be tested functionally to confirm their role in human cardiac conditions The uncovering of all clinically relevant deleterious changes associated with a cardiovascular disease would probably increase our understanding of the clinical variability commonly occurring among affected family relatives and potentially provide with unexpected therapeutic targets for the treatment of symptoms related to the presence of accessory deleterious genetic variants other than the key molecular culprit The objective of this Research Topic is to explore the current challenges presenting to the cardiovascular genetics providers such as clinical geneticists genetic counselors clinical molecular geneticists and molecular pathologists involved in the diagnosis counseling testing and interpretation of genetic tests results for the comprehensive management of patients affected by cardiovascular genetic disorders The Challenge Leonard Charles Van Noppen,1918 *The Challenge* William Gibbs McAdoo,1928 An Answer to Dr. Pusey's Challenge Respecting the Doctrine of the Real Presence John Harrison,1871 **Challenges in Studying Sudden Death Through a Prospective Population-based Study** Susan Keen,2020 Sudden death is an important clinical and public health priority However there are unique challenges to studying the incidence and risk factors for sudden death Unfounded assumptions about disease etiology the timing of death since the victim was last seen alive and free of symptoms and the availability of witnesses to the death or the timely discovery of the death make it likely that case ascertainment of sudden deaths is often incomplete Undercounting of victims and such biases in case selection would lead to estimates of incidence and likely fail to capture social and clinical risk factors in vulnerable or socially isolated individuals An accurate estimate of incidence and potential clinical and social causes of sudden death would seem essential for the prevention of sudden death Obtaining medical records from a population of deceased individuals with histories of diverse medical contact can also be challenging We describe a systematic approach to death screening and a rigorous systematic approach to acquiring medical and death records and case adjudication to identify and characterize all cause out of hospital sudden unexpected death victims among working age adults Our key findings are that sudden death is common and is strongly associated with chronic medical conditions such as hypertension and mental illness poverty and social isolation This case study offers insights into the practicalities of how one prospective population based study of sudden death was executed **Challenge, an Anthology of the Literature of Mountaineering** William Robert Irwin,1950 Complicated Grieving and Bereavement Gerry R. Cox,Robert Bendiksen,Robert G. Stevenson,2002 Losses may provide a turning point where an individual faces personal and social choices Still one may derive significance through the experience of loss while another may encounter bereavement with less consequence Complicated Grieving and Bereavement Understanding and Treating People Experiencing Loss
