*River Confluences, Tributaries and the Fluvial Network* Stephen Rice, Andre Roy, Bruce Rhoads, 2008-07-31 *River Confluences and the Fluvial Network* brings together state of the art thinking on confluence dynamics tributary impacts and the links between processes at these scales and river network functions The book is unique in focus content scope and in bringing together engineering ecological and geomorphological approaches to the three key areas of river system science Taking a global approach this multi authored text features a team of carefully selected internationally renowned experts who have all contributed significantly to recent ground breaking advancements in the field Each chapter includes a comprehensive review of work to date highlighting recent discoveries and the main thrust of knowledge previously unpublished research and case studies challenges and questions detailed references as well as a forward looking assessment of the state of the science

**Rivers in the Landscape** Ellen Wohl, 2020-02-10 Rivers are the great shapers of terrestrial landscapes Very few points on Earth above sea level do not lie within a drainage basin Even points distant from the nearest channel are likely to be influenced by that channel Tectonic uplift raises rock thousands of meters above sea level Precipitation falling on the uplifted terrain concentrates into channels that carry sediment downward to the oceans and influence the steepness of adjacent hill slopes by governing the rate at which the landscape incises Rivers migrate laterally across lowlands creating a complex topography of terraces floodplain wetlands and channels Subtle differences in elevation grain size and soil moisture across this topography control the movement of ground water and the distribution of plants and animals *Rivers in the Landscape* Second Edition emphasizes general principles and conceptual models as well as concrete examples of each topic drawn from the extensive literature on river process and form The book is suitable for use as a course text or a general reference on rivers Aimed at advanced undergraduate students graduate students and professionals looking for a concise summary of physical aspects of rivers *Rivers in the Landscape* is designed to emphasize the connectivity between rivers and the greater landscape by explicitly considering the interactions between rivers and tectonics climate biota and human activities provide a concise summary of the current state of knowledge for physical process and form in rivers reflect the diversity of river environments from mountainous headwater channels to large lowland floodplain rivers and from the arctic to the tropics reflect the diverse methods that scientists use to characterize and understand river process and form including remote sensing field measurements physical experiments and numerical simulations reflect the increasing emphasis on quantification in fluvial geomorphology and the study of Earth surfaces in general provide both an introduction to the classic foundational papers on each topic and a guide to the latest particularly insightful and integrative references

Young, 1929      **Factors Influencing Ice Conveyance at River Confluences** R. Ettema, 1997 This report documents preliminary findings concerning ice jam conditions in river confluences using two laboratory approaches First is categorizing the different conditions of ice discharge into a confluence based on two general classifications free drift of ice and movement of contiguous ice accumulations The variables defining ice discharge for the two categories are assembled via dimensional analysis into two consistent sets of nondimensional parameters The categorization together with the nondimensional parameters is used to evaluate ice jam problems at confluences the two most common causes of jams seem to be sluggish water velocities in the outflow channel and local bathymetric features The second approach examines how confluence geometry and flow processes affect ice discharge for example the influence on ice discharge of bathymetric features The approach uses a large hydraulic model of a two channel confluence which is adaptable to a variety of channels and particle image velocimetry PIV for determining and mapping whole fields of water and ice velocities in a confluence PIV which is becoming extensively used lends itself very well here This study is the first demonstration of the PIV method for ice movement through a two river confluence It shows promise The hydraulic model and PIV method are used in a case study of ice discharge through the confluence of the Missouri and Mississippi rivers a confluence prone to severe ice jams      *Water Resources Research* ,2001      **Proceedings of the Pakistan Academy of Sciences** Pakistan Academy of Sciences, 1979      **Braided Rivers** J.
