

Disciplines and Techniques Constituting Geomatics (cont.)

Geographical Information System (GIS): to make use of a powerful combination of instruments capable of receiving, recording, recalling, transforming, representing and processing georeferenced spatial data.

Decision Support System (DSS): to implement complex Geographical Information Systems, meant to create possible scenarios by modelling the ground truth and to offer a set of solutions to the decision maker.

Expert System (ES): to consider instruments capable of imitating the experts' cognitive processes and their ability to manage the complexity of reality by means of interdependent processes of abstraction, generalization and approximation.

WebGIS: to distribute geographic data remotely stored on dedicated machines for databases, according to complex network architectures.

Ontology: to specify a conceptuality, i.e. the description of concepts and relationships existing for an element or among various elements of a group, entity or class; conceptualization is an abstract simplified vision of the world to be represented for a given application.

Disciplines and Techniques of Systems Control John Peschon, 1965 *Modern Control System Theory* M. Gopal, 1993 About the book The book provides an integrated treatment of continuous time and discrete time systems for two courses at postgraduate level or one course at undergraduate and one course at postgraduate level It covers mainly two areas of modern control theory namely system theory and multivariable and optimal control The coverage of the former is quite exhaustive while that of latter is adequate with significant provision of the necessary topics that enables a research student to comprehend various technical papers The stress is on interdisciplinary nature of the subject Practical control problems from various engineering disciplines have been drawn to illustrate the potential concepts Most of the theoretical results have been presented in a manner suitable for digital computer programming along with the necessary algorithms for numerical computations **Management**, 1968 Management, a Continuing Literature Survey with Indexes, 1968

NASA SP-7500 United States. National Aeronautics and Space Administration, 1968 A Perturbation Technique for the on Line Identification of Discrete Systems Arthur Louis Bailey, 1968 **The Magic Ring** Piero Mella, 2014-05-06 This book presents a gradual path toward educating readers in understanding how Control Systems truly operate and in recognizing simulating and improving them in all fields of activity Starting from the hypothesis that knowledge of Control Systems is not only a technical fact but also represents a discipline that is A discipline is a developmental path for acquiring certain skills or competencies To practice a discipline is to be a lifelong learner You never arrive you spend your life mastering disciplines Senge 2006 p 10 Piero Mella has set the objective of making Control Systems a topic that is in a certain sense simple and attractive by turning to the effective symbolism typical of Systems Thinking models and avoiding too technical and formal a treatment of the subject Thus readers should know that this is not an engineering physics biology or economics text nor a mathematics one either Technical or mathematical tools are not necessary to construct Control Systems instead the book adopts a highly simple and universal logic behind the notion itself of control process and the simple and universal action of the Control Systems that produce this process The Magic Ring Systems Thinking Approach to Control Systems is divided into 10 chapters Chapter 1 seeks to review the basic language of Systems Thinking and the models it allows us to create while Chapter 2 introduces the control process presenting the theoretical structure of four simple Control Systems we all can observe and manage In Chapter 3 a general typology of Control Systems is proposed with examples taken from observations of reality The view of Control Systems is broadened in Chapter 4 by introducing two important generalizations 1 multi lever Control Systems with levers that are independent or dependent of each other 2 multi objective systems with independent or interdependent objectives Chapter 5 outlines the guidelines for recognizing observing or designing Control Systems and presents the problems that arise regarding their logical realization introducing the fundamental distinction between symptomatic and structural control Chapters 6 9 undertake a mental journey through various environments increasingly

broader in scope suggesting to the reader how to recognize therein Control Systems that by their ubiquitous presence make the world possible in all its manifestations Finally Chapter 10 covers ideas about a Discipline of Control Systems and the human aspects of control
