Using and Abusing Science Véronique Molinari, Cyril Besson, 2016 Over the last two centuries as politics has evolved from the status of amateurship to that of profession political discourse together with its practices and their validity has been increasingly subject to questioning Politicians as illustrated by the low turnouts that have recently characterised general elections and a general lack of interest in politics throughout Western countries enjoy less than ever the trust of the electorate and their

discourse is now often criticised for being both hollow and untrustworthy Conversely by evolving from the status of enlightened amateur to that of expert the figure of the scientist has over recent centuries gained credibility with the general public Even though the traditional view of science as the expression of reality has regularly been challenged science continues to be held in high regard and is believed to provide a reliable form of knowledge Summoning science has thus often been a way in everyday life advertising and the popular media to lend authority to a discourse and imply that one's claims are beyond dispute That politicians should have occasionally been tempted to do the same and make up for the deficit of legitimacy of their discourse through the instrumentalisation of scientific arguments or participation in contemporaneous debates on scientific issues is therefore not surprising The issue at stake in this volume is to examine how and to what extent this process may have been taking place in the past three centuries In order to accomplish this the contributions cover various fields of expertise ranging from the hard sciences to more controversial types of science investigating the intricate relations of science and political discourse

Discourse on the Sciences and Arts Jean-Jacques Rousseau, 1992 Rousseau attacks the social and political effects of the dominant forms of scientific knowledge Contains the entire First Discourse contemporary attacks on it Rousseau's replies to his critics and his summary of the debate in his preface to *Narcissus* A number of these texts have never before been available in English The First Discourse and Polemics demonstrate the continued relevance of Rousseau's thought Whereas his critics argue for correction of the excesses and corruptions of knowledge and the sciences as sufficient Rousseau attacks the social and political effects of the dominant forms of scientific knowledge

NGO Discourses in the Debate on Genetically Modified Crops Ksenia Gerasimova, 2017-07-20 The development and use of genetically modified organisms GMOs has been a contentious topic for the last three decades While there have been a number of social science analyses of the issues this is the first book to assess the role of Non Governmental Organizations NGOs in the debate at such a wide geographic scale The various positions for and against GMOs particularly with regard to transgenic crops articulated by NGOs in the debate are dissected classified and juxtaposed to corresponding campaigns These are discussed in the context of key conceptual paradigms including nature fundamentalism and the organic movement post colonialism food sovereignty anti globalisation sustainability and feminism The book also analyses how NGOs interpret the debate and the persuasive communication tactics they use This provides greater understanding of the complexity of negotiations in the debate and explains its specific features such as its global scope and difficulty in finding compromises The author assesses

the long term interests of various participants and changes in perceptions of science and in public communication as a result. Examples of major NGOs such as Greenpeace, Oxfam and WWF are included but the author also provides new research into the role of NGOs in Russia.

Biological Discourses Robert Craig, Ina Linge, 2017. Constructing the Beginning Simon Locke, 2014-04-04. In *Constructing the Beginning*, Simon Locke offers a new approach to considering the enigma of creation science using the perspective of discourse analysis. Using the publications of the British Creation Science Movement to perform a detailed analysis of the creationist case, Locke demonstrates that the discourses and rhetorics used by natural and social scientists are also employed by non-scientists. Out of this study, a view of science as a cultural resource develops, questioning the adequacy of perceived sociological wisdom that sees science as the source and embodiment of cultural rationalization. As a case study of the use of science as a discursive resource in everyday life, *Constructing the Beginning* speaks to scholars of discourse analysis, constructionism, rhetorics, and the public understanding of science. It will also be of great interest to scholars in the areas of cultural studies, sociology of scientific knowledge, and of religion, postmodernism, and sociological theory.

Additional Copy: Creation science is the target of much attack these days from both within and outside of the orthodox scientific community. This book, however, takes a different approach. It is not an attack on creationism nor is it a defense. The author's interest is not in creationism at all but rather in the questions of the role and significance of science in modernity or the public understanding of science. Locke's approach to this issue is a discursive and rhetorical one. Creationism is treated as a case study of the argumentative engagement between science and non-science, which in his view is as central to the commonsense lifeworld of modernity as much as it is to the lives of its intellectuals. An important dimension of the public meaning of science in modernity is its limits and its relations with other modes of thought and belief which continue to survive as discourses in the wider culture. Creationism is merely one example of this general feature. The book begins with a discussion of the current issues in the public understanding of science in relation to traditional sociological views of the impact of science on modernity. This is examined through rationalization and the contrasting view derived from the sociology of scientific knowledge, which points to the likelihood of a much more complex and variable relationship than rationalization proposes. It continues with an argument and detailed analysis that focuses on three main points: the problem of a competing account of reality, the world in the form of evolution, the problem of competing accounts of the Bible, the Word in the form of different versions of Christianity, and the realization that both of these problems must be managed together in such a way that creationists' own versions of the world and of the Word are compatible, a compatibility achieved through a discursive syncretism. The final chapter brings together the strands of the argument to further develop the implications of the dilemma of science for the public understanding of

science through the idea of science as a cultural resource and its possible relation to other such cultural resources within modernity such as Christianity It is suggested that much so called anti science could be made sense of in these terms and proposes further research in this direction
