# Introduction

- Linear discriminant analysis (LDA), normal discriminant analysis (NDA), or discriminant function analysis is a generalization of Fisher's linear discriminant analysis.

- First, in 1936 Fisher formulated linear discriminant for two classes, and later on, in 1948 C.R Rao generalized it for multiple classes.

- It is a method used to find a linear combination of features that separates two or more classes of objects or events.

- LDA is a supervised learning technique.

- LDA is closely related to analysis of variance (ANOVA) and regression analysis.

- LDA is also closely related to principal component analysis (PCA) and factor analysis.

   *Statistical Pattern Recognition* Andrew R. Webb,Andrew Webb,1999 This book provides an introduction to statistical pattern recognition theory and techniques Most of the material presented in this book is concerned with discrimination and classification and has been drawn from a wide range of literature including that of engineering statistics computer science and the social sciences This book is an attempt to provide a concise volume containing descriptions of many of the most useful of today s pattern processing techniques including many of the recent advances in nonparametric approaches to discrimination developed in the statistics literature and elsewhere The techniques are illustrated with examples of real world applications studies Pointers are also provided to the diverse literature base where further details on applications comparative studies and theoretical developments may be obtained Page xv      *Discriminant Analysis and Statistical Pattern Recognition* Geoffrey J. McLachlan,2005-02-25 The Wiley Interscience Paperback Series consists of selected books that have been made more accessible to consumers in an effort to increase global appeal and general circulation With these new unabridged softcover volumes Wiley hopes to extend the lives of these works by making them available to future generations of statisticians mathematicians and scientists For both applied and theoretical statisticians as well as investigators working in the many areas in which relevant use can be made of discriminant techniques this monograph provides a modern comprehensive and systematic account of discriminant analysis with the focus on the more recent advances in the field SciTech Book News a very useful source of information for any researcher working in discriminant analysis and pattern recognition Computational Statistics Discriminant Analysis and Statistical Pattern Recognition provides a systematic account of the subject While the focus is on practical considerations both theoretical and practical issues are explored Among the advances covered are regularized discriminant analysis and bootstrap based assessment of the performance of a sample based discriminant rule and extensions of discriminant analysis motivated by problems in statistical image analysis The accompanying bibliography contains over 1 200 references      **A Statistical Approach to Neural Networks for Pattern Recognition** Robert A. Dunne,2007-07-30 An accessible and up to date treatment featuring the connection between neural networks and statistics A Statistical Approach to Neural Networks for Pattern Recognition presents a statistical treatment of the Multilayer Perceptron MLP which is the most widely used of the neural network models This book aims to answer questions that arise when statisticians are first confronted with this type of model such as How robust is the model to outliers Could the model be made more robust Which points will have a high leverage What are good starting values for the fitting algorithm Thorough answers to these questions and many more are included as well as worked examples and selected problems for the reader Discussions on the use of MLP models with spatial and spectral data are also included Further treatment of highly important principal aspects of the MLP are provided such as the robustness of the model in the event of outlying or atypical data the influence and sensitivity curves of the MLP why the MLP is a fairly robust model and

modifications to make the MLP more robust The author also provides clarification of several misconceptions that are prevalent in existing neural network literature Throughout the book the MLP model is extended in several directions to show that a statistical modeling approach can make valuable contributions and further exploration for fitting MLP models is made possible via the R and S PLUS codes that are available on the book s related Web site A Statistical Approach to Neural Networks for Pattern Recognition successfully connects logistic regression and linear discriminant analysis thus making it a critical reference and self study guide for students and professionals alike in the fields of mathematics statistics computer science and electrical engineering      Handbook of Optimization in Medicine Panos M.
