

Discursive psychology and discourse analysis

Jonathan Potter

Discursive psychology is an approach that addresses psychological matters in terms of how they figure in discourse – in conversations over family mealtimes, in therapy sessions, in written statements. It begins with psychology, as it confronts people as they live their lives. How does a speaker show that they are not prejudiced, while developing a derogatory version of an entire cultural group? How is upset displayed, understood and receipted in a call to a child protection helpline? How does a parent show that they care for a disabled daughter while they close down a phone call? How does a police officer move between technical and mundane notions of intention when interviewing a suspect? The point here is that psychology is something that is live and visible as it appears in and through discourse, as actions are performed and receipted. This is not just through psychological language – psychological predicates and avowals – although that is interesting and important, but through styles of speaking, through inflection and prosody, through descriptions that invoke and suggest psychological states and dispositions and through the apparatus of accountability that builds motivation and intention. All of this works through, and is dependent on, the normative organization of conversation, whose operations are themselves a major resource for psychological display and understanding. This is why discourse analysis must be at the heart of a reconfigured psychology.

Discursive psychology (henceforth DP) is a systematic and comprehensive alternative perspective to more traditional psychological approaches such as psychoanalysis, behaviourism and social cognition. It is focused on how psychological objects, orientations and displays are parts of discourse practices. The focus is on discourse practices as they appear naturally in everyday and institutional settings. These practices involve talk, but that talk is coordinated with embodied action and often responsive to, or reworking, texts (documents, files, computer fields and so on). Developing this perspective has necessarily involved a radical reworking of the nature and boundaries of the 'psychological': part of its excitement has been the way an entirely new vision of psychology has started to crystallize.

It has also required a shift in methodology to an approach that takes seriously the nature of human discourse. It has been crucial to move away from the 'telecommunication' picture of language as a conduit sending ideas from one mind to another, as Harris (1981) so memorably described it, to a view that starts with the practical, action oriented role of discourse. The methodological principles of DP follow from its conceptualization of discourse as a basic medium of action rather than as an abstract system of descriptions. This methodological innovation has built on more familiar critiques of experimental and survey methods in psychological research, but has taken methodological
