**Negation and Control in Prolog** Lee Naish, 1986-10 The contributions to this volume cover all aspects of the assessment and management of hepatobiliary disease The focal points of the book consist of three state of the art summaries The first of these deals with the highly topical problem of liver transplants from the point of view of patient selection The second considers drug induced liver injury in view of the fact that the liver is the main metabolic site for a number of drugs The final summary deals with liver and aging it asks whether the liver follows the aging process of the host organisms and whether the liver of aged liver transplant candidate donors could be suitable for grafting Aside from these topics the volume presents basic research on hepatic transport mechanisms intrahepatic cholestasis and gall stone disease which serves as a background for the topics more specifically concerning the assessment of liver function Much of the book is then devoted to the management of the commonest forms of liver diseases and their complications such as chronic active hepatitis liver cirrhosis portal hypertension hepatic encephalopathy hepatorenal syndrome and ascites

[Internet Programming Languages](#) Henri E. Bal, Boumediene Belkhouche, Luca Cardelli, 1999-10-06 This book is a collection of articles about the influence that the recent greater scope and availability of wide area networks is having on the semantics design and implementation of programming languages The Internet has long provided a global computing infrastructure but for most of its history there has not been much interest in programming languages tailored specifically to that infrastructure More recently the Web has produced a widespread interest in global resources and as a consequence in global programmability It is now commonplace to discuss how programs can be made to run effectively and securely over the Internet The Internet has already revolutionized the distribution and access of information and is in the process of transforming commerce and other areas of fundamental importance In the field of programming languages the Internet is having a deep revitalizing effect by challenging many fundamental assumptions and requiring the development of new concepts programming constructs implementation techniques and applications This book is a snapshot of current research in this active area The articles in this book were presented at the Workshop on Internet Programming Languages which was held on May 13 1998 at Loyola University Chicago USA The papers submitted to the workshop were screened by the editors After the workshop the presented papers were refereed by an external reviewer and one of the editors resulting in the current selection
