

CHAPTER 2:

Discrete Data Control Systems

Introduction to Digital Control

In most modern engineering systems,

- There is a need to control the evolution with time of one or more of the system variables.
- Controllers are required to ensure satisfactory transient and steady-state behavior for these engineering systems.
- To guarantee satisfactory performance in the presence of disturbances and model uncertainty, most controllers in use today employ some form of **negative feedback**.
- A sensor is needed to measure the controlled variable and compare its behavior
