

Library Functions in C

- Library functions in C language are inbuilt functions which are grouped together and placed in a common place called library.
- Each library function in C performs specific operation.
- We can make use of these library functions to get the pre-defined output instead of writing our own code to get those outputs.
- These library functions are created by the persons who designed and created C compilers.
- All C standard library functions are declared in many header files which are saved as file_name.h.
- We are including these header files in our C program using “#include<file_name.h>” command to make use of the functions those are declared in the header files.

LIST OF MOST USED HEADER FILES IN C :

| Header file | Description |
|--------------------------|--|
| stdio.h | This is standard input/output header file in which Input/Output functions are declared |
| conio.h | This is console input/output header file |
| string.h | All string related functions are defined in this header file |
