C2 Compiler Concepts:

C2 Compiler Concepts Bernd Teufel, Stephanie Schmidt, Thomas Teufel, 2012-12-06 Writing a compiler is a very good practice for learning how complex problems could be solved using methods from software engineering It is extremely important to program rather carefully and exactly because we have to remember that a compiler is a program which has to handle an input that is usually incorrect Therefore the compiler itself must be error free Referring to Niklaus Wirth we postulate that the grammatical structure of a language must be reflected in the structure of the compiler Thus the complexity of a language determines the complexity of the compiler cf *Compilerbau* B G Teubner Verlag Stuttgart 1986 This book is about the translation of programs written in a high level programming language into machine code It deals with all the major aspects of compilation systems including a lot of examples and exercises and was outlined for a one session course on compilers The book can be used both as a teacher s reference and as a student s text book In contrast to some other books on that topic this text is rather concentrated to the point However it treats all aspects which are necessary to understand how compilation systems will work Chapter One gives an introductory survey of compilers Different types of compilation systems are explained a general compiler environment is shown and the principle phases of a compiler are introduced in an informal way to sensitize the reader for the topic of compilers

Generic and Indexed Programming Jeremy Gibbons, 2012-07-20 Generic programming is about making programs more widely applicable via exotic kinds of parametrization not just along the dimensions of values or of types but also of things such as the shape of data algebraic structures strategies computational paradigms and so on Indexed programming is a lightweight form of dependently typed programming constraining flexibility by allowing one to state and check relationships between parameters that the shapes of two arguments agree that an encoded value matches some type that values transmitted along a channel conform to the stated protocol and so on The two forces of genericity and indexing balance each other nicely simultaneously promoting and controlling generality The 5 lectures included in this book stem from the Spring School on Generic and Indexed Programming held in Oxford UK in March 2010 as a closing activity of the generic and indexed programming project at Oxford which took place in the years 2006 2010

Metadata Management in Statistical Information Processing Karl A. Froeschl, 2013-12-21 As the integration of statistical data collected in various subject matter domains becomes more and more important in several socio economic etc investigation areas the management of so called metadata a formal digital processing of information about data gains tremendously increasing relevance Unlike current information technologies e g database systems computer networks facilitating merely the technical side of data collation a coherent integration of empirical data still remains cumbersome and thus rather costly very often because of a lack of powerful semantic data models capturing the very meaning and structure of statistical data sets Recognizing this deficiency Metadata Management proposes a general framework for the computer aided integration and harmonization of distributed heterogeneous statistical data sources aiming at a truly comprehensive
