When a net force acts on an object, the object's motion will change. This means that the object's speed or direction will change. However, if the net force is zero, the object's motion will not change. This means that the object will continue moving in the same direction at the same speed.</p> <p>Newton's second law states that force is equal to mass times acceleration. This means that if you know the mass of an object and the acceleration it is experiencing, you can calculate the force acting on it. For example, if a 2 kg object is accelerating at 3 m/s², the force acting on it is 6 N.</p> <p>Newton's third law states that for every action, there is an equal and opposite reaction. This means that if one object exerts a force on another object, the second object exerts an equal and opposite force on the first object. For example, if a car exerts a force on the ground, the ground exerts an equal and opposite force on the car.</p> </div> <p>Answer the questions that follow.</p> <ol style="list-style-type: none"> Which of the following is NOT a force? <ol style="list-style-type: none"> Friction Gravity Speed Acceleration Which of the following is NOT a force? <ol style="list-style-type: none"> Force Mass Acceleration Speed Which of the following is NOT a force? <ol style="list-style-type: none"> Force Mass Acceleration Speed Which of the following is NOT a force? <ol style="list-style-type: none"> Force Mass Acceleration Speed <div style="text-align: right;">  </div>
