Boeing 777 Non Normal Procedures:

Integration of Multiple Non-Normal Checklist Procedures Into a Single Checklist Procedure for Transport Aircraft: A Preliminary Investigation Lynda J. Foernsler, 1996 Human Factors for Civil Flight Deck Design Don Harris, 2017-03-02

Human error is now the main cause of aircraft accidents. However, in many cases, the pilot simply falls into a trap that has been left for him/her by the poor design of the flight deck. This book addresses the human factors issues pertinent to the design of modern flight decks. Comprising of invited chapters from internationally recognised experts in human factors and flight deck design, contributions span the world of industry, government research establishments and academia. The book brings together the practical experience of professionals across the human factors and flight deck design disciplines to provide a single, all-encompassing volume. Divided into two main parts, part one of the book examines the benefits of human engineering, flight deck design process, head-down display design, head-up display design, auditory warning systems, flight control systems, control levers and aircraft handling qualities, flight deck automation and human-computer interaction on the flight deck, and anthropometrics for flight deck design. Part two is concerned with flight deck evaluation, the human factors evaluation of flight decks, human factors in flight test, and the regulatory viewpoint. Of interest to all human factors professionals operating in high technology, high risk dynamic industries, as well as those engaged directly in aerospace activities, the book will also be of key importance to engineers with an interest in human factors for flight deck design, academics, and third year and post-graduate human factors, ergonomics, and psychology students.

AIR CRASH INVESTIGATIONS: EYE OF THE NEEDLE: The Crash of British Airways Flight 38 Hans Griffioen, editor, 2012-11-01

On 28 November 2008, a Boeing 777-200ER operated by British Airways as flight BA38 on its way from Beijing, China to London Heathrow, suffered on approach to Heathrow Airport an in-flight engine rollback. At 720 feet AGL, the right engine ceased responding to autothrottle commands for increased power, and instead, the power reduced to 1.03 Engine Pressure Ratio (EPR). Seven seconds later, the left engine power reduced to 1.02 EPR. This reduction led to a loss of airspeed, and the aircraft touching down some 330 m short of the paved surface of Runway 27L at London Heathrow. The investigation identified that the reduction in thrust was due to restricted fuel flow to both engines. It was determined that the restriction occurred most probably in the Fuel Oil Heat Exchangers. The investigation identified the forming of ice in the fuel system as the probable cause. The aircraft was destroyed, but there were no casualties.

Games and Learning Alliance João Dias, Pedro A. Santos, Remco C. Veltkamp, 2017-11-28

This book constitutes the refereed proceedings of the 6th International Conference on Games and Learning Alliance (GALA 2017) held in Lisbon, Portugal, in December 2017. The 16 revised regular papers presented together with 6 poster papers were carefully reviewed and selected from 45 submissions. The papers cover topics such as games in education and training, games for health and special children, augmented and virtual reality methods, and tools for design and development, and poster abstracts.
