Impact on Strategic Stability of Ballistic Missile Defense in Eastern Europe Derek F. Schin, 2009 While the United States and Russia have many disagreements very few of these affect nuclear weapon policy One that has recently done so however is the argument over ballistic missile defense systems in Europe The United States has signed bilateral missile defense agreements with both Poland and the Czech Republic but none of the countries have yet ratified these arrangements The uncertainty of the future of these systems Russia's opposition to them and most importantly the complex interaction of how these agreements affect strategic stability will all be examined in this paper A second aspect of this paper is an examination of the evolution and current definition of strategic stability itself By providing historical context it will be shown that the concept of strategic stability is still relevant today Ultimately this paper finds that despite the fact that the limited capabilities of the proposed Eastern European missile defense system itself do not pose a threat to Russia's intercontinental ballistic missile force the decisions made by Moscow in response to the system may in fact negatively affect strategic stability

Ballistic Missile Defence and US National Security Policy Andrew Futter, 2013-04-12 This book examines the transformation in US thinking about the role of Ballistic Missile Defence BMD in national security policy since the end of the Cold War The evolution of the BMD debate after the Cold War has been complex complicated and punctuated As this book shows the debate and subsequent policy choices would often appear to reflect neither the particular requirements of the international system for US security at any given time nor indeed the current capabilities of BMD technology Ballistic Missile Defence and US National Security Policy traces the evolution of policy from the zero sum debates that surrounded the Strategic Defense Initiative as Ronald Reagan left office up to the relative political consensus that exists around a limited BMD deployment in 2012 The book shows how and why policy evolved in such a complex manner during this period and explains the strategic reasoning and political pressures shaping BMD policy under each of the presidents who have held office since 1989 Ultimately this volume demonstrates how relative advancements in technology combined with growth in the perceived missile threat gradually shifted the contours and rhythm of the domestic missile defence debate in the US towards acceptance and normalisation This book will be of much interest to students of missile defence and arms control US national security policy strategic studies and international relations in general

Countering the Proliferation of Weapons of Mass Destruction Thanos P. with the problem **Britain and Ballistic Missile Defence, 1942-2002** Jeremy Stocker,2004-08-02 Defence against ballistic missiles has been a subject of UK political policy and technical investigation since World War II this book analyses that long history **Miscalculation: Risks of Inadvertent Nuclear War** Saghir Iqbal,2018-04-16 An impending nuclear holocaust is likely to happen if the world community does not take action A conflict that has been simmering for many years is beginning to spiral out of control Two nuclear powers have an unresolved dispute that has increased tensions in the region Both countries are purchasing and developing sophisticated state of the art weapons that could unleash great terror and destruction on the populations of both countries with also serious global ramifications The world s most dangerous flashpoint has the highest chance of a nuclear war occurring it is deemed by many to be more serious than the Cuban Missile Crisis and North Korea s nuclear sabre rattling The dispute needs to be amicably resolved between both nations and confidence building measures need to be implemented Ballistic Missile Defence and the Alliance Laurence W. Strategic Thinking, Deterrence and the US Ballistic Missile Defense Project Reuben Steff,2016-04-01 A systematic critical survey of American strategic thinking and the strategic culture in which it is formed In particular this book seeks to interrogate the theory and strategy of nuclear deterrence and its relationship to the concept of missile defence Drawing widely on the theoretical literature in international relations and strategic studies it identifies the key groups that have competed over America s nuclear policy post 1945 and examines how the concept of missile defence went through a process of gestation and intellectual contestation leading to its eventual legitimization in the late 1990s Steff sheds light on the individuals groups institutions and processes that led to the decision by the Bush administration to deploy a national missile defence shield Additionally Steff systematically examines the impact deployment had on the calculations of Russia and China In the process he explains that their reactions under the Bush administration have continued into the Obama era revealing that a new great power security dilemma has broken out This Steff shows has led to a decline in great power relations as a consequence

Diverging Objectives Shawn A. Russell, 2018 Since the US left the ABM Treaty in 2002 an assumption has been prevalent that Russia's consistent concerns with the limited US ballistic missile defense BMD system was political bluster because its nuclear deterrent was large enough to easily defeat any US defenses Previous studies generally based their arguments on a faulty understanding of Moscow's deterrence requirements assuming it would accept a minimum deterrence standard of only a few warheads surviving to detonation The following study shows that Moscow desires a credible threat of unacceptable damage to deter the United States and that an expanding US ballistic missile defense BMD system could prevent Russia from achieving this criterion and ultimately degrade bilateral strategic stability The analysis uses a scenario planning framework to compare four future scenarios of US BMD versus Russia's nuclear deterrent These comparisons demonstrate that unchecked expansion of the US missile defense system especially when combined with future arms limitations will cause legitimate concern in Russia over its ability to deter the United States during a crisis Moscow's reduced confidence will continue to compel it to find new capabilities to penetrate and circumvent missile defense in order to restore balance degrading arms race stability between the United States and Russia Any further BMD expansion will further degrade strategic stability and put at risk future arms control agreements

Abstract

Ballistic Missile Defence Anand Sharma, 2010 Since World War II the ever improving sophistication in missiles capabilities in terms of payload range accuracy etc had led to an unprecedented and unending arms race and proliferation The obvious and connatural unification of ballistic missile and nuclear bomb shaped it as the most high profile weapon system that has dominated the world politics and security paradigm so intricately With the new perception of deterrence and threat the warfare has taken a new dimension Concurrently Ballistic Missile Defence as a concept evolved during 1960s However the two superpowers deploying thousands of intercontinental ballistic missiles ICBM remained effective stability tool during Cold War and development of missile defences were restricted through the regime of arms control treaties as in the perception of the bipolar world Anti Ballistic Missile Systems will weaken the stability stratagem

anchored on policy of Mutual Assured Destruction Nevertheless development of BMD system continued and remained one of the most controversial issues in the world politics and international security paradigm Ballistic missile defence from its concept has grown manifold Initially missile defences have been put into operation centred on destroying the launch platform through ground based nuclear tipped ballistic missile system With increased sophistication in missile technology the challenge is thrown to intercept an incoming ballistic missile in its boost phase mid course phase or in terminal phase Notwithstanding there are many technological constraints to arrive at a desired comprehensive shield to provide effective and efficient security A debate followed world over on efficacy and viability of such a defensive shield as the technology is yet to be proven and that is prohibitively costly The debate also brings forward the environmental issues weaponisation of space and lethality of missile defence against its counter measures and issues of proliferation and arms control Despite all such criticism and debates over its viability the urgency towards development and deployment world over is alarming With the phenomenal technological sophistication and growth missile defence has acquired the status of a frontier of the 21st century impacting global strategic stability as well as arms control This book is an attempt to study the ballistic missile defence concepts systems technologies and its growing influence as a revolutionary military system and a strategic political tool This study posits various strategic issues in context to implications of missile defence development and deployment Evaluation of Antitactical Ballistic Missile Defence Hans Günter Brauch, 1989
