**Author and Journalist** ,1925      Bulletin of the Authors' League of America ,1926      **Automatic Disambiguation of Author Names in Bibliographic Repositories** Anderson A. Ferreira,Marcos André Gonçalves,Alberto H. F. Laender,2022-06-01 This book deals with a hard problem that is inherent to human language ambiguity In particular we focus on author name ambiguity a type of ambiguity that exists in digital bibliographic repositories which occurs when an author publishes works under distinct names or distinct authors publish works under similar names This problem may be caused by a number of reasons including the lack of standards and common practices and the decentralized generation of bibliographic content As a consequence the quality of the main services of digital bibliographic repositories such as search browsing and recommendation may be severely affected by author name ambiguity The focal point of the book is on automatic methods since manual solutions do not scale to the size of the current repositories or the speed in which they are updated Accordingly we provide an ample view on the problem of automatic disambiguation of author names summarizing the results of more than a decade of research on this topic conducted by our group which were reported in more than a dozen publications that received over 900 citations so far according to Google Scholar We start by discussing its motivational issues Chapter 1 Next we formally define the author name disambiguation task Chapter 2 and use this formalization to provide a brief taxonomically organized overview of the literature on the topic Chapter 3 We then organize summarize and integrate the efforts of our own group on developing solutions for the problem that have historically produced state of the art by the time of their proposals results in terms of the quality of the disambiguation results Thus Chapter 4 covers HHC Heuristic based Clustering an author name disambiguation method that is based on two specific real world assumptions regarding scientific authorship Then Chapter 5 describes SAND Self training Author Name Disambiguator and Chapter 6 presents two incremental author name disambiguation methods namely INDi Incremental Unsupervised Name Disambiguation and INC Incremental Nearest Cluster Finally Chapter 7 provides an overview of recent author name disambiguation methods that address new specific approaches such as graph based representations alternative predefined similarity functions visualization facilities and approaches based on artificial neural networks The chapters are followed by three appendices that cover respectively i a pattern matching function for comparing proper names and used by some of the methods addressed in this book ii a tool for generating synthetic collections of citation records for distinct experimental tasks and iii a number of datasets commonly used to evaluate author name disambiguation methods In summary the book organizes a large body of knowledge and work in the area of author name disambiguation in the last decade hoping to consolidate a solid basis for future developments in the field      *Catalog of Copyright Entries* Library of Congress.
