Automorphic Forms of Several Variables Satake, Morita, 1984-01-01      **Automorphic Forms of Several Variables** Ichiro Satake, 1984      Automorphic Forms And Zeta Functions - Proceedings Of The Conference In Memory Of Tsuneo Arakawa Masanobu Kaneko, Siegfried Bocherer, Tomoyoshi Ibukiyama, Fumihiro Sato, 2006-01-03 This volume contains a valuable collection of articles presented at a conference on Automorphic Forms and Zeta Functions in memory of Tsuneo Arakawa an eminent researcher in modular forms in several variables and zeta functions The book begins with a review of his works followed by 16 articles by experts in the fields including H Aoki R Berndt K Hashimoto S Hayashida Y Hironaka H Katsurada W Kohnen A Krieg A Murase H Narita T Oda B Roberts R Schmidt R Schulze Pillot N Skoruppa T Sugano and D Zagier A variety of topics in the theory of modular forms and zeta functions are covered Theta series and the basis problems Jacobi forms automorphic forms on  $Sp(1, q)$  double zeta functions special values of zeta and L functions many of which are closely related to Arakawa's works This collection of papers illustrates Arakawa's contributions and the current trends in modular forms in several variables and related zeta functions      **Automorphic Forms of Several Variables** Ichirō Satake, 1984      *Representation Theory and Number Theory in Connection with the Local Langlands Conjecture* Jürgen Ritter, 1989 The Langlands Program summarizes those parts of mathematical research belonging to the representation theory of reductive groups and to class field theory These two topics are connected by the vision that roughly speaking the irreducible representations of the general linear group may well serve as parameters for the description of all number fields In the local case the base field is a given  $p$ -adic field  $K$  and the extension theory of  $K$  is seen as determined by the irreducible representations of the absolute Galois group  $G_K$  of  $K$  Great progress has been made in establishing correspondence between the supercuspidal representations of  $GL_n(K)$  and those irreducible representations of  $G_K$  whose degrees divide  $n$  Despite these advances no book or paper has presented the different methods used or even collected known results This volume contains the proceedings of the conference Representation Theory and Number Theory in Connection with the Local Langlands Conjecture held in December 1985 at the University of Augsburg The program of the conference was divided into two parts i the representation theory of local division algebras and local Galois groups and the Langlands conjecture in the tame case and ii new results such as the case  $n = p$  the matching theorem principal orders tame Deligne representations classification of representations of  $GL_n$  and the numerical Langlands conjecture The collection of papers in this volume provides an excellent account of the current state of the local Langlands Program      **Symmetry, Representations, and Invariants** Roe Goodman, Nolan R. Wallach, 2009-07-30 Symmetry is a key ingredient in many mathematical physical and biological theories Using representation theory and invariant theory to analyze the symmetries that arise from group actions and with strong emphasis on the geometry and basic theory of Lie groups and Lie algebras Symmetry Representations and Invariants is a significant reworking of an earlier highly acclaimed work by the authors The result is a comprehensive

introduction to Lie theory representation theory invariant theory and algebraic groups in a new presentation that is more accessible to students and includes a broader range of applications The philosophy of the earlier book is retained in presenting the principal theorems of representation theory for the classical matrix groups as motivation for the general theory of reductive groups The wealth of examples and discussion prepares the reader for the complete arguments now given in the general case

**Key Features of Symmetry Representations and Invariants**

- 1 Early chapters suitable for honors undergraduate or beginning graduate courses requiring only linear algebra basic abstract algebra and advanced calculus
- 2 Applications to geometry curvature tensors topology Jones polynomial via symmetry and combinatorics symmetric group and Young tableaux
- 3 Self contained chapters appendices comprehensive bibliography
- 4 More than 350 exercises most with detailed hints for solutions further explore main concepts
- 5 Serves as an excellent main text for a one year course in Lie group theory
- 6 Benefits physicists as well as mathematicians as a reference work

**Automorphic Forms, Shimura Varieties, and L-functions** Laurent Clozel, J. S. Milne, 1990

**Euler Products and Eisenstein Series** Gorō Shimura, 1997 This volume has three chief objectives

- 1 the determination of local Euler factors on classical groups in an explicit rational form
- 2 Euler products and Eisenstein series on a unitary group of an arbitrary signature and
- 3 a class number formula for a totally definite hermitian form

Though these are new results that have never before been published Shimura starts with a quite general setting He includes many topics of an expository nature so that the book can be viewed as an introduction to the theory of automorphic forms of several variables Hecke theory in particular Eventually the exposition is specialized to unitary groups but they are treated as a model case so that the reader can easily formulate the corresponding facts for other groups There are various facts on algebraic groups and their localizations that are standard but were proved in some old papers or just called well known In this book the reader will find the proofs of many of them as well as systematic expositions of the topics This is the first book in which the Hecke theory of a general nonsplit classical group is treated The book is practically self contained except that familiarity with algebraic number theory is assumed
