Invariant Theory Sebastian S. Koh, 2006-11-15 This volume of expository papers is the outgrowth of a conference in combinatorics and invariant theory In recent years newly developed techniques from algebraic geometry and combinatorics have been applied with great success to some of the outstanding problems of invariant theory moving it back to the forefront of mathematical research once again This collection of papers centers on constructive aspects of invariant theory and opens with an introduction to the subject by F Grosshans Its purpose is to make the current research more accessible to mathematicians in related fields

Complex Analysis Steven G. Krantz, 2006-11-14 This conference gathered together a small group of people with similar interests in the geometric function theory of several complex variables While the speeches were of a specialized nature the papers in the proceedings are largely of a survey and speculative nature The volume is intended to serve both students and researchers as an invitation to active new areas of research The level of the writing has been intentionally set in such a way that the papers will be accessible to a broad audience

Elementary Operators And Applications: In Memory Of Domingo A Herrero - Proceedings Of The International Workshop Martin Mathieu, 1992-07-17 The aim of this first international conference entirely devoted to the theory of elementary operators and their interrelations with and applications to other fields was both to give a comprehensive overview of the development of the theory of elementary operators since its beginnings at the end of the last century as well as to discuss some of the recent research done in this area The volume also includes applications to algebraic
