### **1) Discuss in detail about confidential policy.**

#### **Confidentiality Policies:**

A confidentiality policy is intended to protect secrets; specifically, it is intended to prevent unauthorized disclosure of information.

The Bell-LaPadula Confidentiality Model is a state machine–based multilevel security policy. The model was originally designed for military applications. State machine models define states with current permissions and current instances of subjects accessing the objects.

The Bell–LaPadula model leverages mandatory access control: the model does not give users power to alter access control in the system manifested in a principle called tranquility.

#### **Multi-Level Security**

In its simplest form, BLP is a multi-level security model that protects Confidentiality. The goals of the system are to keep secrets with specific confidentiality classifications disclosed only to subjects with the appropriate clearances to read them. In addition, subjects should not be able to accidentally (or intentionally) leak secrets to other subjects with lower clearances.

#### **Multi–Lateral Security**

Sometimes data levels are not enough. To reduce the risk of unauthorized data flow, you may want to limit subjects' access not only by their clearance level but also by what they're working on. It's not only about how much you trust the subject, but also about what they need to know

### **2) Briefly explain about hybrid policies**

#### **Hybrid Policies:**

#### **The Chinese Wall model:**

A Chinese wall or ethical wall is an information barrier protocol within an organization designed to prevent exchange of information or communication that could lead to conflicts of interest. For example, a Chinese wall may be established to separate people
