Big Bangs:

The Big Bang and Steady State Universe - a unifying theory. John Neville,2019-06-10 It is hypothesized that all matter in the universe is sucked back at varying points in time and space to the moment and location of the Big Bang Thus the matter energy given off by the Big Bang is repeatedly used as fuel for the Big Bang which repeats presumably endlessly at the same location and time Thus the universe has the Big Bang at the start but is also in a constant state The force that sucks matter energy back to the Big Bang explains gravity The matter energy of the universe is thus both finite and infinite in its being Dark energy is the force that in the future sucks currently existing matter back to the place and time of the Big Bang As more time passes the amount of dark matter should increase and the amount of dark energy will also alter At the end of time the amount of dark matter should be 100%% of the matter in the universe and dark energy will cease to exist

Three Big Bangs Holmes Rolston III,2010-10-19 Cosmology **EVOLUTION** Leonid E. Grinin,Andrey V. Korotayev, The present volume is the sixth issue of the Evolution Yearbook series Our Yearbooks are designed to present to its readers the widest possible spectrum of subjects and issues from universal evolutionism to the analysis of particular evolutionary regularities in the development of biological abiotic and social systems culture cognition language etc The main objective of our Yearbook is the creation of a unified interdisciplinary field of research within which scientists specializing in different disciplines could work within the framework of unified or similar paradigms using common terminology and searching for common rules tendencies and regularities Global evolution in connection with the Big History becomes the main subject of our Yearbook We strive to arrange each issue in such a way that the line from cosmic evolution to the human future is evident Similar to the previous issues this Yearbook shows some aspects of the evolutionary advance from the earlier phases to the anticipated future of human society But on the whole this volume is devoted to different aspects and facts of megaevolution and some universal theories in an attempt to find common ground in the diversity of manifestation of evolution and its forms at different stages of development The title of this issue Evolutionary Trends Aspects and Patterns is fully justified The volume consists of four sections Big History s Phases and Long Term Trends Cosmic Evolution The Aspects of Socio Cultural and Political Evolution and Looking from the Past into the Future As before we strive to arrange every issue in such a way that the line from cosmic evolution to the human future is evident Megahistory and global evolution still are the main subjects of our Yearbook This Yearbook will be useful both for those who study interdisciplinary macroproblems and for specialists working in focused directions as well as for those who are interested in evolutionary issues of Cosmology Biology History Anthropology Economics and other areas of study More than that this edition will challenge and excite your vision of your own life and the new discoveries going on around us *Technological Revolutions and the Periphery* Eduardo da Motta e Albuquerque,2023-10-13 This book evaluates the uneven propagation of technological revolutions investigating the roots of this phenomenon in the absorptive capabilities that are built by countries and regions at the periphery To understand this

global process this book looks to two dimensions time and geography Temporally the book follows the sequence of technological revolutions in the last 250 years With regard to geography the book studies five different regions at the periphery China India Africa Russia and Latin America to understand how they differ in the institutional processes that shape their absorptive capabilities Focusing on each technological revolution and its impact on those five peripheric regions the chapters illustrate how each region coped with each shock wave emanating from the center Providing a truly global outlook of a complex system with a dynamic nature this book will be of interest to researchers and students of development economics the economics of innovation evolutionary economics and the economics of science and technology

The Far Horizons of Time H. Chris Ransford, 2015-04-24 What is Time Assuming no prior specialized knowledge by the reader the book raises specific hitherto overlooked questions about how time works such as how and why anyone can be made to be at the very same instant simultaneous with events that are actually days apart It examines abiding issues in the physics of time or at its periphery which still elude a full explanation such as delayed choice experiments the brain's perception of time during saccadic masking and more and suggests that these phenomena can only exist because they ultimately obey applicable mathematics thereby agreeing with a modern view that the universe and everything within it including the mind are ultimately mathematical structures It delves into how a number of conundrums such as the weak Anthropic Principle could be resolved and how such resolutions could be tested experimentally All its various threads converge towards a same new vision of the ultimate essence of time seen as a side effect from a deeper reality

The Three Big Bangs Philip M. Dauber, Richard A. Muller, 1996 Scientists identify three Big Bangs crucial to the creation of the universe beginning with the dinosaur killing collision of Earth and a comet to a massive thermo nuclear star explosion and finally the original Bang believed to have started it all
