Computer Simulation Studies in Condensed Matter Physics III David P. Landau, K.K. Mon, Heinz-Bernd Schüttler, 2012-12-06 The contribution of computer simulation studies to our understanding of the properties of a wide range of condensed matter systems is now well established The Center for Simulational Physics of the University of Georgia has been hosting a series of annual workshops with the intent of bringing together experienced practitioners in the field as well as relative newcomers to provide a forum for the exchange of ideas and recent results This year s workshop the third in the series was held February 12-16 1990 These

proceedings are a record of the workshop and are published with the goal of timely dissemination of the papers to a wider audience. The proceedings are divided into four parts. The first contains invited papers dealing with simulational studies of classical systems and also includes an introduction to some new simulation techniques. A separate section is devoted to invited papers on quantum systems including new results for strongly correlated electron and quantum spin models believed to be important for the description of high T_c superconductors. The third part consists of a single invited paper which presents a comprehensive treatment of issues associated with high performance computing including differences in architectures and a discussion of access strategies. The contributed papers constitute the final part.

Computer Simulation Studies in Condensed Matter Physics II David P. Landau, Kin K. Mon, Heinz-Bernd Schüttler, 2012-12-06 A broad overview of recent developments in computer simulation studies of condensed matter systems is provided in this book. Both classical and quantum systems are discussed. The contributions present new physical results and describe new simulation techniques and novel ways of interpreting simulational data. Topics covered include parallelization and vectorization, cellular automata, fractals and aggregation, damage spreading, molecular dynamics of proteins and rotating molecules in solids, quantum Monte Carlo studies of strongly correlated electron systems.
