Case Studies from Austronesia, the Pacific, the Americas, and Theoretical Outlook Andrej Malchukov, Bernard Comrie, 2015-09-14 Earlier empirical studies on valency have looked at the phenomenon either in individual languages or a small range of languages or have concerned themselves with only small subparts of valency e.g. transitivity ditransitive constructions leaving a lacuna that the present volume aims to fill by considering a wide range of valency phenomena across 30 languages from different parts of the world The individual language studies each written by a specialist or group of specialists on that language and covering both valency patterns and valency alternations are based on a questionnaire reproduced in the volume and an on line freely accessible database thus guaranteeing comparability of cross linguistic results In addition introductory chapters provide the background to the project and discuss its main characteristics and selected results while a series of featured articles by leading scholars who helped shape the field provide an outside perspective on the volume's approach The volume is essential reading for anyone interested in valency and argument structure irrespective of theoretical persuasion and will serve as a model for future descriptive studies of valency in individual languages

Local and Metropolitan Communication Systems Toshiharu Hasegawa, Yukata Takahashi, Guy Pujolle, Hideaki Takagi, 2013-03-19 We are witnessing an ever increasing thrust toward the era of multimedia information networks largely spurred by the U.S. Government's proposal for the National Information Infrastructure in the fall of 1993 While more people are subscribing to the services of narrowband ISDN the implementation of broadband ISDN by means of Asynchronous Transfer Mode ATM has accelerated since the formation of the ATM Forum in 1993 In the meantime frame relay may prevail for inter LAN connections In the upper layer of the network commercial use of Internet is rapidly emerging To ensure the successful development of technology it is vital to use a judicious approach in assessing the architecture and performance of the

systems that implement the technology It is this spirit that underlies the present conference which is intended to provide an international forum for the presentation of recent research results in the area of local and metropolitan communication systems This conference has two sets of predecessors It is the third in a series of international conferences on Local and Metropolitan Communication Systems LAN the first was held in Toulouse in 1986 and the second in Palma de Mallorca in 1991 It is also the fourth in a triennial series organized by Kyoto University and others on the performance of communication related systems the previous ones were held in Tokyo 1985 and Kyoto 1988 1991

Analysis and Design of Communication Techniques in Spectrally Efficient Wireless Relaying Systems Jian Zhao,2010 This dissertation studies the communication technologies in relaying systems with multiple antennas especially in the multiple input multiple output MIMO two way relaying systems Both information theoretic aspects and practical communication strategies are considered and analyzed For the information theoretic analysis an analytical framework for the coverage of MIMO relaying systems based on an outage capacity criterion is proposed For MIMO two way relaying systems different data combining schemes at the relay are compared based on their achievable rates In addition optimal time division TD strategies for MIMO two way decode and forward DF relaying systems are proposed and analyzed When the optimal TD strategies are applied the increase of the achievable rate regions in the system is significant compared to those using the equal TD strategy For the practical transmission schemes we propose the self interference SI aided channel estimation and data detection schemes for the broadcast phase of two way DF relaying systems Such schemes exploit the SI in two way DF relaying systems when the superposition coding SPC scheme is applied When the network coding scheme is applied in two way DF relaying systems we propose an asymmetric data rate transmission scheme that utilizes the known data bits at the receivers Such a scheme exploits the a priori known bits at the weak link receiver in the broadcast phase of two way relaying systems
