Communication Satellites in the Geostationary Orbit Donald M. Jansky, Michel C. Jeruchim, 1987 Communication Satellites in the Geostationary Orbit Jansky Donald M., Michel C. Jeruchim, **Technical and Economic Trade-offs for the Geostationary Orbit Communications Resource** Russell B. Chadwick, Dwight S. Irwin, 1973 **Communication Satellite in a Geostationary Orbit** Bradley C. Kane, 1985 **Theory of Geostationary Satellites** Chong-Hung Zee, 1989-04-30

Geostationary or equatorial synchronous satellites are a daily reminder of our space efforts during the past two decades. The nightly television satellite weather picture, the intercontinental telecommunications of television transmissions and telephone conversations and the establishment of educational programs in remote regions on Earth are constant reminders of the presence of these satellites. As used here, the term geostationary must be taken loosely because in the long run, the satellites will not remain stationary with respect to an Earth-fixed reference frame. This results from the fact that these satellites, as is true for all satellites, are incessantly subject to perturbations other than the central body attraction of the Earth. Among the more predominant perturbations are the ellipticity of the Earth's equator, the Sun and Moon, and solar radiation pressure. Higher harmonics of the Earth's potential and tidal effects also influence satellite motion but they are of second order when compared to the predominant perturbations. This volume deals with the theory of geostationary satellites. It consists of seven chapters. Chapter 1 provides a general discussion including a brief history of geostationary satellites and their practical applications. Chapter 2 describes the Earth's gravitational potential field and the methodology of solving the geostationary satellite problem. Chapter 3 treats the effect of Earth's equatorial ellipticity, triaxiality on a geostationary satellite. Chapter 4 deals with the effects of the Sun and Moon on the satellite's motion, while Chapter 5 presents the combined influences of the Sun, Moon, and solar radiation pressure.

An Introduction to Mission Design for Geostationary Satellites J.J. Pocha, 2012-12-06. This book provides an introduction to the mission design of communication satellites. There are many excellent books on orbit mechanics and astrodynamics, but until now there has been no single work that explains the ins and outs of mission design and explains why things are done the way they are done, as well as how they are done. The book will be of interest not only to practising mission analysts but also to spacecraft systems engineers, spacecraft project managers, and to those who wish to employ the unique attributes of geosynchronous spacecraft for useful purposes. At last, an explanation of the ins and outs of mission design is offered in a clear and concise manner. The self-contained reference book utilizes analytical details and illustrations to explain the broad aspects of design and mission operations. This unique approach makes it easier for you to assimilate the necessary information to analyze, plan, and carry out a geosynchronous mission from launch through orbit transfer and station acquisition to station keeping and on-orbit operations. This book will be a useful reference for practising mission analysts, spacecraft systems engineers, project managers, and others with a practical interest in the unique attributes of geosynchronous spacecraft. *Communication*
