Galloway, 1972 **Communication Satellite Systems Technology** Richard B. Marsten, 2014-12-03 Communication Satellite Systems Technology reviews the state of the art in communication satellite systems technology Topics covered range from commercial point to point systems and military satellite communication systems to satellite support subsystems and components along with high power systems Communication satellites are also discussed from a sociological perspective Comprised of 50 chapters this book begins with a 1945 article by Arthur C Clarke in which he proposed the construction of rocket space stations in orbit that would provide complete radio coverage of the globe as well as extraterrestrial relay services The reader is then introduced to the Early Bird satellite and its hydrogen peroxide orbit control and orientation system Details of the sequence of maneuvers required after transfer ellipse injection until final placement in a stationary orbit are given The methods of calculation of maneuver parameters as well as numerical examples of certain Early Bird orbit changes and maneuver parameters are described The effects of the principal long term disturbing forces on the satellite are also considered Subsequent chapters focus on military satellite communication systems satellite support subsystems and components high power systems and systems concepts The organization and program of Intelsat are also evaluated This monograph will be of value to practitioners in the fields of aeronautics astronautics and satellite communications *Communications Satellites* Joseph N. Pelton, Robert J. Oslund, Peter Marshall, 2004-09-22 Over the past 40 years satellites have played a key role in creating a global culture spreading worldwide entertainment stimulating technological interchange and promoting trade around the world Communications Satellites Global Change Agents addresses communications satellites not only in terms of the technology and the services they provide but also with consideration of the technology's impact in socio political security economic policy news entertainment and cultural spheres Editors Joseph N Pelton Robert J Oslund and Peter Marshall bring together contributions that place

satellites into a broad context and examine how they influence and define today's world. Written in a non-technical, reader-friendly style, chapters investigate how satellite communications work and explore the role of satellites in such arenas as news and entertainment systems around the world, Internet E-business and the new global economy, global television and radio channels, military operations and education, health services, economic development and electronic immigration.

Communications Satellites: Global Change Agents examines what satellites have been and projects how they will evolve in the future, articulating what they mean to the world today and forecasting what they will mean tomorrow. As the definitive source on communications satellites and their role in today's world, this volume serves as a valuable, unique and timely resource for scholars and students in telecommunications, communication and technology, mass communication and society, and broadcasting.

Innovations in Satellite Communications and Satellite Technology Daniel Minoli, 2015-02-27. Surveys key advances in commercial satellite communications and what might be the implications and/or opportunities for end users and service providers in utilizing the latest, fast-evolving innovations in this field. This book explores the evolving technical options and opportunities of satellite networks. Designed to be a self-contained reference, the book includes background technical material in an introductory chapter that will serve as a primer to satellite communications. The text discusses advances in modulation techniques such as DBV-S2 extensions, DVS-S2X, spotbeam-based geosynchronous and medium earth orbit High Throughput Satellite (HTS) technologies and Internet applications, enhanced mobility services with aeronautical and maritime applications, Machine-to-Machine (M2M) satellite applications, emerging ultra-HD technologies and electric propulsion. The author surveys the latest innovations and service strategies and the resulting implications, which involves discussing advances in modulation techniques and HTS spotbeam technologies, surveying emerging high-speed aeronautical mobility services and maritime and other terrestrial mobility services, assessing M2M machine-to-machine applications, emerging Ultra-HD video technologies and new space technology. Satellite communication is an integral part of the larger fields of commercial television, media, government and military communications because of its multicast, broadcast capabilities, mobility, reliability and global reach. High Throughput Satellites are expected to revolutionize the field during this decade, providing very high-speed yet cost-effective Internet access and connectivity anywhere in the world, in rural areas, in the air and at sea. M2M connectivity enabled by satellite communications connects trucks on transcontinental trips, aircraft in real-time telemetry aggregation and mercantile ships. A comprehensive analysis of the new advances in satellite communications.
