Elements of Architecture Rem Koolhaas, 2017-10-14 Une mine d'or pour parcourir encore et toujours un de ces livres qui fournira aux bâtisseurs actuels et futurs de notre monde tout le savoir dont ils ont besoin pour aborder les questions actuelles et celles auxquelles ils seront confrontés ArchDaily Architecture is a compelling mixture of stability and flux In its solid forms time and space collide amalgamating distant influences elements that have been around for over 5 000 years and others that were re-invented yesterday Elements of Architecture focuses on the fragments of the rich and complex architectural collage Window facade balcony corridor fireplace stair escalator elevator The book seeks to excavate the micro narratives of building detail The result is no single history but rather the web of origins contaminations similarities and differences in architectural evolution including the influence of technological advances climactic adaptation political calculation economic contexts regulatory requirements and new digital regimes Derived from Koolhaas exhaustive and much lauded exhibition at the 2014 Venice Architecture Biennale this is an essential toolkit to understanding the pieces parts and fundamentals that comprise structure around the globe Designed by Irma Boom the book contains essays from Rem Koolhaas Stephan Trueby Manfredo di Robilant and Jeffrey Inaba interviews with Werner Sobek and Tony Fadell of Nest and an exclusive photo essay by Wolfgang Tillmans

Perspectives on Variation Nicole Delbecq, Johan van der Auwera, Dirk Geeraerts, 2011-06-24 The significant advances witnessed over the last years in the broad field of linguistic variation testify to a growing convergence between sociolinguistic approaches and the somewhat older historical and comparative research traditions Particularly within cognitive and functional linguistics the evolution towards a maximally dynamic approach to language goes hand in hand with a renewed interest in corpus research and quantitative methods of analysis Many researchers feel that only in this way one can do justice to the complex interaction of forces and factors involved in linguistic variability both synchronically and diachronically The contributions to the present volume illustrate the ongoing evolution of the field By bringing together a series of analyses that rely on extensive corpora to shed light on sociolinguistic historical and comparative forms of variation the volume highlights the interaction between these subfields Most of the contributions go back to talks presented at the meeting of the Societas Linguistica Europaea held in Leuven in 2001 The volume starts with a global typological view on the sociolinguistic landscape of Europe offered by Peter Auer It is followed by a methodological proposal for measuring phonetic similarity between dialects designed by Paul Heggarty April McMahon and Robert McMahon Various papers deal with specific phenomena of socially and conceptually driven variation within a single language For Dutch Jos Tummers Dirk Speelman and Dirk Geeraerts analyze inflectional variation in Belgian and Netherlandic Dutch Reinhild Vandekerckhove focuses on interdialectal convergence between West Flemish urban dialects and Arjan van Leuvensteijn studies competing forms of address in the 17th century Dutch standard variety The cultural and conceptual dimension is also present in the diachronic lexicosemantic explorations presented by Heli Tissari Clara Molina and Caroline Gevaert for English expressions

referring to the experiential domains of love sorrow and anger respectively the history of words is systematically linked up with the images they convey and the evolving conceptualizations they reveal The papers by Heide Wegener and by Marcin Kilarski and Grzegorz Krynicki constitute a plea against arbitrariness of alternations at the level of nominal morphology dealing with marked plural forms in German and with gender assignment to English loanwords in the Scandinavian languages respectively their distributional accounts bring into the picture a variety of motivating factors The four cross linguistic studies that close the volume focus on the differing ways in which even closely related languages exploit parallel morphosyntactic patterns They share the same methodological concern for combining rigorous parametrization and quantification with conceptual and discourse functional explanations While Griet Beheydt and Katleen Van den Steen confront the use of formally defined competing constructions in two Germanic and two Romance languages respectively Torsten Leuschner as well as Gisela Harras and Kirsten Proost analyze how a particular speaker's attitude is expressed differently in various Germanic languages
