Baltimore Lectures on Molecular Dynamics and the Wave Theory of Light: Founded on ... Twenty Lectures Delivered in Johns Hopkins University, Baltimore, in October 1884: Followed by Twelve Appendices on Allied Subjects William Thomson (Baron Kelvin.), 1904 Baltimore Lectures on Molecular Dynamics and the Wave Theory of Light Baron, William Thomson Kelvin, 2013-09 This historic book may have numerous typos and missing text Purchasers can usually download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1904 edition Excerpt Molar from it when the extinction is not perfect to be polarizationally resolved into two components having their vibrational lines perpendicular to one another The desired extinction requires the annulment of each of these two components and nothing else Proper change of the two chosen independent variables determinately secures these two annulments when what is commonly called homogeneous light that is light of which all the vibrations are of the same period is used 95 In the detailed plan of 90 94 the two independent variables chosen are the orientation of the first Nicol and the orientation of the Fresnel s rhomb This is thoroughly convenient if N is mounted on a proper mechanism to give it freedom to move in a plane perpendicular to its axis and to keep its orientation round this axis constant The Fresnel should be mounted so as to be free to move round an axis fixed in the direction of the light entering it and it should carry a short tube round the light emerging from it into which N3 fits easily Thus when the Fresnel is turned round the line of the light reflected from the mirror it carries iV2 round in a circle as it were with a hollow crank pin so that it is always in the proper position for carrying the emergent light to the eye of the observer Two other choices of independent variables each I believe as well conditioned and as convenient as that of 90 94 but simpler in not wanting the special mechanism for carrying N are described in 98 below 96 Nothing in 90 95 involves any hypothesis and we have in them an observational method for fully without any photometry determining T S and E S which are for incident **Baltimore lectures on molecular dynamics and the wave**
