Banking and Currency Committee,1932 **Crisis in Competitive Versus Monopolistic Banking Systems** Mr.Bruce D. Smith,Mr.Gianni De Nicolo,John H. Boyd,2003-09-01 We study a monetary general equilibrium economy in which banks exist because they provide intertemporal insurance to risk averse depositors A banking crisis is defined as a case in which banks exhaust their reserve assets Under different model specifications the banking industry is either a monopoly bank or a competitive banking industry If the nominal rate of interest rate of inflation is below above some threshold a monopolistic banking system will always result in a higher lower crisis probability Thus the relative crisis probabilities under the two banking systems cannot be determined independently of the conduct of monetary policy We further show that the probability of a costly banking crisis is always higher under competition than under monopoly However this apparent advantage of the monopoly bank is due strictly to the fact that it provides relatively less valuable intertemporal insurance These theoretical results suggest that banking system structure may matter for financial stability **Banking** Major Bronson Foster,1923 *The National Banking System and Note Issues of the United States of America and Foreign Countries* Albert P.
