Abstract

Despite the great potential of large language models (LLMs) in machine comprehension, it is still disturbing to fully count on them in real-world scenarios. This is probably because there is no rational explanation for whether the comprehension process of LLMs is aligned with that of experts. In this paper, we propose SCOP to carefully examine how LLMs perform during the comprehension process from a cognitive view. Specifically, it is equipped with a systematical definition of five requisite skills during the comprehension process, a strict framework to construct testing data for these skills, and a detailed analysis of advanced open-sourced and closed-sourced LLMs using the testing data. With SCOP, we find that it is still challenging for LLMs to perform an expert-level comprehension process. Even so, we notice that LLMs share some similarities with experts, e.g., performing better at comprehending local information than global information. Further analysis reveals that LLMs can be somewhat unreliable — they might reach correct answers through flawed comprehension processes. Based on SCOP, we suggest that one direction for improving LLMs is to focus more on the comprehension process, ensuring all comprehension skills are thoroughly developed during training¹.

the process from step 1 to 2 based on the document. LLMs might arrive at the correct answer following other processes, e.g., using memorized data or shortcuts (Figure 1(b)). This difference doesn't matter in a non-existent scenario where LLMs can give correct answers for every question. However, it matters a lot in real-world safety-critical scenarios (law, education, healthcare) especially when normal readers cannot judge the correctness of answers (Pan et al., 2023; Amann et al., 2020). The only solution is to push LLMs to perform the same comprehension process as experts. This encourages us to make a primary attempt and carefully examine the comprehension process of LLMs.

While numerous efforts have been made on comprehension evaluation of LLMs, they are busy finding more proper ways to compare the answers generated after the comprehension process with human references (Rajpurkar et al., 2018; Lai et al., 2017; Dua et al., 2019). This may not provide a reliable judgment, as higher matching scores do not mean better comprehension of the document (Dunietz et al., 2020). A few works (Sugawara et al., 2017; Wang et al., 2022; Dunietz et al., 2020; Sugawara et al., 2021) working in the opposite direction — they prefer to investigate whether LLMs act as accomplished linguists (such as coreference resolution and named entity recognition) before the
