Categorical Combinators, Sequential Algorithms, and Functional Programming P.-L. Curien, 2012-12-06 This book is a revised edition of the monograph which appeared under the same title in the series Research Notes in Theoretical Computer Science Pit man in 1986 In addition to a general effort to improve typography English and presentation the main novelty of this second edition is the integration of some new material Part of it is mine mostly jointly with coauthors Here is brief guide to these additions I have augmented the account of categorical combinatory logic with a description of the confluence properties of rewriting systems of categorical combinators Hardin Yokouchi and of the newly developed calculus of explicit substitutions Abadi Cardelli Curien Hardin Levy and Rios which are similar in spirit to the categorical combinatory logic but are closer to the syntax of λ calculus Section 1.2 The study of the full abstraction problem for PCF and extensions of it has been enriched with a new full abstraction result the model of sequential algorithms is fully abstract with respect to an extension of PCF with a control operator Cartwright Felleisen Curien An order extensional model of error sensitive sequential algorithms is also fully abstract for a corresponding extension of PCF with a control operator and errors Sections 2.6 and 4.1 I suggest that sequential algorithms lend themselves to a decomposition of the function spaces that leads to models of linear logic Lamarche Curien and that connects sequentiality with games Joyal Blass Abramsky Sections 2.1 and 2.6

Higher-Order Computability John Longley,Dag Normann,2015-11-06 This book offers a self contained exposition of the theory of computability in a higher order context where computable operations may themselves be passed as arguments to other computable operations The

subject originated in the 1950s with the work of Kleene, Kreisel and others and has since expanded in many different directions under the influence of workers from both mathematical logic and computer science. The ideas of higher order computability have proved valuable both for elucidating the constructive content of logical systems and for investigating the expressive power of various higher order programming languages. In contrast to the well known situation for first order functions it turns out that at higher types there are several different notions of computability competing for our attention and each of these has given rise to its own strand of research. In this book the authors offer an integrated treatment that draws together many of these strands within a unifying framework revealing not only the range of possible computability concepts but the relationships between them. The book will serve as an ideal introduction to the field for beginning graduate students as well as a reference for advanced researchers.

Automata, Languages and Programming

Andrzej Lingas, Rolf Karlsson, 1993-06-23. The International Colloquium on Automata Languages and Programming ICALP is an annual conference series sponsored by the European Association for Theoretical Computer Science EATCS. It is intended to cover all important areas of theoretical computer science such as computability, automata, formal languages, term rewriting, analysis of algorithms, computational geometry, computational complexity, symbolic and algebraic computation, cryptography, data types and data structures, theory of data bases and knowledge bases, semantics of programming languages, program specification, transformation and verification, foundations of logic programming, theory of logical design and layout, parallel and distributed computation, theory of concurrency and theory of robotics. This volume contains the proceedings of ICALP 93 held at Lund University, Sweden, in July 1993. It includes five invited papers and 51 contributed papers selected from 151 submissions.

Higher-Order Algebra, Logic, and Term Rewriting. J. Heering, 1994-07-28. This volume contains the final revised versions of the best papers presented at the First International Workshop on Higher Order Algebra, Logic and Term Rewriting HOA 93 held in Amsterdam in September 1993. Higher order methods are increasingly applied in functional and logic programming languages as well as in specification and verification of programs and hardware. The 15 full papers in this volume are devoted to the algebra and model theory of higher order languages, computational logic techniques including resolution and term rewriting and specification and verification case studies. In total they provide a competently written overview of current research and suggest new research directions in this vigorous area.
