Computational Methods For Linear Integral Equations:

Computational Methods for Linear Integral Equations Prem Kythe,Pratap Puri,2011-06-28 This book presents numerical methods and computational aspects for linear integral equations Such equations occur in various areas of applied mathematics physics and engineering The material covered in this book though not exhaustive offers useful techniques for solving a variety of problems Historical information cover ing the nineteenth and twentieth centuries is available in fragments in Kantorovich and Krylov 1958 Anselone 1964 Mikhlin 1967 Lonseth 1977 Atkinson 1976 Baker 1978 Kondo 1991 and Brunner 1997 Integral equations are encountered in a variety of applications in many fields including continuum mechanics potential theory geophysics electricity and mag netism kinetic theory of gases hereditary phenomena in physics and biology renewal theory quantum mechanics radiation optimization optimal control sys tems communication theory mathematical economics population genetics queue ing theory and medicine Most of the boundary value problems involving differ ential equations can be converted into problems in integral equations but there are certain problems which can be formulated only in terms of integral equations A computational approach to the solution of integral equations is therefore an essential branch of scientific inquiry **Computational Methods for Integral Equations** L. Computational Methods for Integral Equations Saeed Vahdati,2012-09-25 Computational Methods for Solving System of Volterra Integral Equation Rostam K. Saeed,Omer M. Al-Faour,2011-04 In this work the existence and uniqueness theorem for single linear Volterra integral equation has been generalized to a system of linear Volterra integral equation of the second kind Depending on Banach fixed point theorem some new results have been proved Also a Taylor series expansion has been considered to solve a system of linear Volterra integral equations of the second kind and a system of linear Volterra integro differential equations of the second kind In addition three different types of iterative methods have been formulated to solve above systems Furthermore we derive a new iterative method named by modified successive approximation method to solve above systems By this modification a faster rate of convergence for the successive method is established Also we proved a new theorem about the existence uniqueness and convergence of this method Two different kinds of weighted residual methods have been applied to treat the above systems Moreover the spectral method has been modified and applied for solving the above systems **Handbook of Computational Methods for Integration** Prem K.
