Computer Architecture '96 Ronald Pose, 1997-03 The Australasian Computer Architecture Workshop ACAW is a series of annual workshops which was originally developed for the computer architecture community ACAW 96 the fourth in this series was the first to be held as a full conference with refereed research papers solicited from authors in Australia Japan and Austria These proceedings are a result of this successful two day event and contain 14 research papers covering various areas of computer architecture as well as the papers of the two keynote speakers *Fundamentals of Computer Security* Josef Pieprzyk, Thomas Hardjono, Jennifer Seberry, 2013-03-09 This reference work looks at modern concepts of computer security It introduces the basic mathematical background necessary to follow computer security concepts before moving on to modern developments in cryptography The concepts are presented clearly and illustrated by numerous examples Subjects covered include private key and public key encryption hashing digital signatures authentication secret sharing group oriented cryptography and many others The section on intrusion detection and access control provide examples of security systems implemented as a part of operating system Database and network security is also discussed The final chapters introduce modern e business systems based on digital cash *Conference Proceedings*, 2006 [Understanding Agent Systems](#) Mark d'Inverno, Michael Luck, 2013-03-09 Since the first edition was published two years ago much has been done on extending the work done on SMART to address new and important areas 3 5 54 79 80 108 110 116 118 120 122 In this second edition we have revised updated and corrected the existing text and added three new chapters These chapters provide a broader coverage of the field of agents and show in more detail how the specific framework described can be used to examine other areas In Chapter 6 we use the concepts of discovery to apply the framework to autonomous interaction in multi agent systems in Chapter 10 we use it for considering normative agents and systems and in Chapter 11 we describe work on an implementation and development environment As a course text the book can be considered in different parts as follows Chapter 1 and Chapter 2 offer a basic introduction to agents and their core components Chapter 3 and Chapter 4 cover relationships between agents and basic notions of cooperation for multi agent systems Chapter 5 and Chapter 6 introduce sociological agents which are needed for reasoning and planning and their use in reasoning about communication and interaction Chapter 7 Chapter 8 Chapter 9 and Chapter 10 each cover different application areas relating to different aspects including coordination through the contract net agent architecture through AgentSpeak L social dependence networks and normative systems [Transactions on Large-Scale Data- and Knowledge-Centered Systems XXXI](#) Abdelkader Hameurlain, Josef Küng, Roland Wagner, Tran Khanh Dang, Nam Thoai, 2016-12-21 The LNCS journal Transactions on Large Scale Data and Knowledge Centered Systems focuses on data management knowledge discovery and knowledge processing which are core and hot topics in computer science Since the 1990s the Internet has become the main driving force behind application development in all domains An increase in the demand for resource sharing across different sites connected

through networks has led to an evolution of data and knowledge management systems from centralized systems to decentralized systems enabling large scale distributed applications providing high scalability Current decentralized systems still focus on data and knowledge as their main resource Feasibility of these systems relies basically on P2P peer to peer techniques and the support of agent systems with scaling and decentralized control Synergy between grids P2P systems and agent technologies is the key to data and knowledge centered systems in large scale environments This the 31st issue of Transactions on Large Scale Data and Knowledge Centered Systems contains six revised selected papers from the 2nd International Conference on Future Data and Security Engineering FDSE 2015 and the 9th International Conference on Advanced Computing and Applications ACOMP 2015 which were held in Ho Chi Minh City Vietnam in November 2015 Topics covered include big data analytics data models and languages security and privacy complex business services and cloud data management
