Computer-integrated Manufacturing James A. Rehg, Henry W. Kraebber, 2001 Written for the technologist or engineer who wants a clear picture of the basic concepts and real world application of computer integrated manufacturing this book s features include systems approach demonstration of how CIM fits into current manufacturing systems and how the technology is used to solve actual industrial problems interdisciplinary coverage which includes engineering business and production considerations for decision making applications the CIM model used here is consistent with the SME new manufacturing enterprise wheel developed by the Society of Manufacturing Engineers and simulation software the problem sets refer to simulation software so that readers can see a manufacturing operation under realistic production constraints

CIM Systems Ferdinand Haverman Mitchell, 1991 Combining manufacturing systems with management techniques this integrated approach to designing and developing CIM systems provides a multi disciplinary system oriented background understanding of advanced manufacturing issues and strategies It also offers design methods that can be used to create competitive manufacturing systems The text s methods include assessing problems determining solution approaches and developing and integrating systems based on relevant engineering science and management disciplines Software is included for a simple system environment simulation SES model that illustrates the application of key concepts Real world application design models are applied to specific system examples The author discusses design principles within a comprehensive framework providing a context for understanding manufacturing operations and relationships Throughout the text the integrated technical and management considerations aim to encourage effective CIM team management

Computer-Assisted Management and Control of Manufacturing Systems Spyros G. Tzafestas, 2012-12-06 Modern manufacturing systems involve many processes and operations that can be monitored and controlled at several levels of intelligence At the highest level there is a computer that supervises the various manufacturing functions whereas at the lowest level there are stand alone computer controlled systems of manufacturing processes and robotic cells Until recently computer aided manufacturing systems constituted isolated islands of automation each oriented to a particular application but present day systems offer integrated approaches to manufacturing and enterprise operations These modern systems known as computer integrated manufacturing CIM systems can easily meet the current performance and manufacturing competitiveness requirements under strong environmental changes CIM systems are much of a challenge and imply a systemic approach to the design and operation of a manufacturing enterprise Actually a CIM system must take into account in a unified way the following three views the user view the technology view and the enterprise view This means that CIM includes both the engineering and enterprise planning and control activities as well as the information flow activities across all the stages of the system

Justification Methods for Computer Integrated Manufacturing Systems H. R. Parsaei, Thomas Ward, Waldemar Karwowski, 1990

Advanced automated manufacturing technology systems are perceived by many manufacturers to be the latest alternative to meet today's global market needs. Higher productivity, better quality, and flexibility are just a few examples of the numerous benefits which can be achieved by implementing modern computer-controlled manufacturing systems. Many firms perceive Computer Integrated Manufacturing (CIM) as one of the most promising paths to achieve manufacturing excellence. A CIM project can not be successfully implemented unless it is supported by long-term strategic planning and economic analysis of the required capital investment decisions. This book treats planning as the first step in the justification process. Papers explore both strategic planning for computer-integrated manufacturing (CIM) and more detailed issues such as part tool grouping and machine loading. The critical issue of planning for communications between various levels of computation and devices on the floor is reviewed. Capacity planning and planning for assembly and quality control are also covered. The important role of champions in justification is explored.

Development of a Computer-integrated Manufacturing

Computer-Integrated Manufacturing Handbook V.D.

Hunt, 2012-12-06 Manufacturing has entered the early stages of a revolutionary period caused by the convergence of three powerful trends. The rapid advancement and spread of manufacturing capabilities worldwide has created intense competition on a global scale. The emergence of advanced manufacturing technologies is dramatically changing both the products and processes of modern manufacturing. Changes in traditional management and labor practices, organizational structures, and decision-making criteria represent new sources of competitiveness and introduce new strategic opportunities. These trends are interrelated and their effects are already being felt by the U.S. manufacturing community. Future competitiveness for manufacturers worldwide will depend on their response to these trends. Based on the recent performance of U.S. manufacturers' efforts to respond to the challenges posed by new competition, technology, and managerial opportunities have been slow and inadequate. Domestic markets that were once secure have been assailed by a growing number of foreign competitors producing high-quality goods at low prices. In a number of areas such as employment, capacity utilization, research and development expenditures, and capital investment trends in U.S. manufacturing over the last decade have been unfavorable or have not kept pace with major foreign competitors such as Japan. There is substantial evidence that many U.S. manufacturers have neglected the manufacturing function, have overemphasized product development at the expense of process improvements, and have not begun to make the adjustments that will be necessary to be competitive.

Automation, Production Systems, and Computer-integrated Manufacturing Mikell P. Groover, 2015 Automation Production Systems and Computer Integrated Manufacturing provide up-to-date coverage of production systems, how they are sometimes automated and computerized, and how they can be mathematically analyzed to obtain performance metrics. The text is designed primarily for engineering students at the advanced undergraduate or beginning graduate levels in
