## **Computer Numerical Control Lab Manual:**

**Cad/CAM Lab Manual** Sathish D,2018-06-26 Computer aided design CAD involves creating computer models defined by geometrical parameters These models typically appear on a computer monitor as a three dimensional representation of a part or a system of parts which can be readily altered by changing relevant parameters CAD systems enable designers to view objects under a wide variety of representations and to test these objects by simulating real world conditions Computer aided manufacturing CAM uses geometrical design data to control automated machinery CAM systems are associated with computer numerical control CNC or direct numerical control DNC systems These systems differ from older forms of numerical control NC in that geometrical data are encoded mechanically Since both CAD and CAM use computer based methods for encoding geometrical data it is possible for the processes of design and manufacture to be highly integrated Computer aided design and manufacturing systems are commonly referred to as CAD CAM

**Learning Computer Numerical Control** Michael Janke,Janke,1992 Most training in numerical control today is done on the job Machinists and machine operators learn how to run CNC machines from more experienced machinists who show them techniques for operating setting up and programming These techniques are introduced in a logical sequence this book attempts to parallel that method as much as possible Information is first provided on how to operate a machine and then how to program it so that much of the initial bewilderment that occurs when learning numerical control is eliminated This introductory CNC text is positioned for use in hands on training situations emphasizing CNC tooling and set up entry level programming and industry standard controls and programmes
