Computer-based Problem Solving Process Teodor Rus, 2015-03-19 One side effect of having made great leaps in computing over the last few decades is the resulting over abundance in software tools created to solve the diverse problems Problem solving with computers has in consequence become more demanding instead of focusing on the problem when conceptualizing strategies to solve them users are side tracked by the pursuit of even more programming tools as available Computer Based Problem Solving Process is a work intended to offer a systematic treatment to the theory and practice of designing implementing and using software tools during the problem solving process This method is obtained by enabling computer systems to be more Intuitive with human logic rather than machine logic Instead of software dedicated to computer experts the author advocates an approach dedicated to computer users in general This approach does not require users to have an advanced computer education though it does advocate a deeper education of the computer user in his or her problem domain logic This book is intended for system software teachers designers and implementers of various aspects of system software as well as readers who have made computers a part of their day today problem solving

Think Like a Programmer V. Anton Spraul, 2012-08-12 The real challenge of programming isn t

learning a language's syntax it's learning to creatively solve problems so you can build something great In this one of a kind text author V Anton Spraul breaks down the ways that programmers solve problems and teaches you what other introductory books often ignore how to Think Like a Programmer Each chapter tackles a single programming concept like classes pointers and recursion and open ended exercises throughout challenge you to apply your knowledge You'll also learn how to Split problems into discrete components to make them easier to solve Make the most of code reuse with functions classes and libraries Pick the perfect data structure for a particular job Master more advanced programming tools like recursion and dynamic memory Organize your thoughts and develop strategies to tackle particular types of problems Although the book's examples are written in C the creative problem solving concepts they illustrate go beyond any particular language in fact they often reach outside the realm of computer science As the most skillful programmers know writing great code is a creative art and the first step in creating your masterpiece is learning to Think Like a Programmer

Computer-aided Problem Solving for Scientists and Engineers Sundaresan Jayaraman, 1991 This title is designed for undergraduate courses in computing or computer applications taken by engineering or science students A brief introduction to basic computer concepts is followed by discussion of the various categories of software available for meeting the different types of tasks facing the engineer or scientist The book includes coverage of spreadsheets equation solving database management word processing communication graphics and utility *Theoretical Approaches to Non-Numerical Problem Solving* R. B. Banerji, M. D. Mesarovic, 2012-12-06 Advances in computer technology have pointed out the next important area of computer applications solution of non numerical problems It is hardly necessary to emphasize the importance of these kind of problems First of all most of the decisions one has to make in real life situations are non numerical in the first instance and can be represented as numerical problems only as approximations which are often only partially valid Second to use the computer to its full potential it should be employed as a logical machine capable of deduction and not just as a numerical calculating machine Thus the computer would extend man's capability for logical reasoning and not just for his capability to do fast and accurate calculation It is not a new area indeed non numerical problems are central in fields such as artificial intelligence heuristic programming pattern recognition classification and information processing and retrieval etc However it is fair to assess that progress in the area has not been quite as expected One of the reasons was a lack of conceptual and theoretical framework in which to investigate different classes of non numerical problems to improve understanding of

various types of problems and methods for their solutions and furthermore to enable the methods which have been proven as effective in one situation to be used in another situation with appropriately similar structure
